INVESTING IN SUCCESS

New machinery, enhanced front engineering and faster RFQs: M-TEK's latest investments

promise to deliver all of the above

As part of its self-funded capital improvement plan, M-TEK is set to undertake phase two of its plans with another series of substantial investments. With completion of all improvements expected for delivery towards Q1 of FY2012, the developments will address: new machinery, a substantial increase in vertical integration capabilities, enhanced front engineering and design support, improved request for quotes (RFQ) captures and response times, plus a broadening of the value added portfolio available to customers.

As result of the initial investment, M-TEK has seen its overall warehouse capability increase by 200 per cent. The latter benefits from an external receiving and docking bay, a new mezzanine floor for additional operational space and automated in-line optical comparators. New and additional personnel have also been appointed to continuously improve the

customer experience and overall efficiency in the warehouse, quality, inspection, procurement and manufacturing sections.

Building on the company's customer centric ethos, M-TEK is confident of its future. The company has implemented a manufacturing support apprenticeship scheme,

designed to propagate its know-how and groom fresh talent into a reliable, dedicated and committed British workforce.

With four SMT lines, automated selective soldering processes, full programming, test and support capabilities and fully fledged electromechanical integration supported by x-ray capabilities, M-TEK is the obvious choice for a full-turnkey solution where quality and flexibility are paramount.
