

Equipment Hire

RN Electronics offer a varied and sometimes unique range of test equipment for hire.

Sometimes, due to the intangible nature of EMC phenomena, a trial and error approach is required to produce a robust design. In response to this need we initiated the EMC test equipment hire service, enabling our customers to recreate some of the EMC phenomena on their own premises. Since its initial inception, due to demand, we have expanded the hire service to include, other RF test equipment.

EMC & RF Equipment

Amplifiers	Analysers – Spectrum
Antennas	Comb Generators
ESD – Gun	Filters
Generator –Signal – Pulse	LISNs
Loads	Meters
Oscilloscopes	Power Meters

From November 2009 we are going one step further and offering a range of microwave equipment for hire. Traditionally hire companies have been reluctant to offer this type of equipment due to its delicacy, high value, and singular calibration requirements.

We will, where appropriate, include connectors, leads, loads, manuals etc, in order to make a working system. Generally equipment will be calibrated in house. If you require a UKAS traceable calibration this can be arranged given sufficient notice. Equipment hire is outside the scope of our UKAS accredited testing laboratory no. 2360 activities.

Microwave Equipment (1-170GHz)

Antennas	Attenuators – fixed – variable
Amplifiers - low noise – module – power	Circulators
DC isolators – DC Injector	Detectors
Directional Couplers	Filters
Isolators	Mixers – harmonic - balanced
Multipliers	Phase Shifters
Waveguide Transitions	Waveguide Tapers
