TDA2003H

ST

The TDA2003H requires few external components to produce an amplifier up to 12W into loads as low as 1.6R. It can also be used in bridging mode, delivering 18W into 4R. With an operating voltage range of 8 to 18V, it can be used in many applications including in-car stereos and radios. No electrical insulation is required between the mounting tab and the heatsink. Full data sheet available on our web site.

TDA7000 FM Receiver

Phillips

The TDA7000 only requires a few external components to produce a working FM radio. Alignment is easy as only one coil is required. The IC includes the RF input stage, mixer, local oscillator, IF amplifier, phase demodulator, mute detector and switch. Operating voltage 2.7V to 10V. Full data sheet available on our website.

Bargraph displays

National

A range of 18 pin DIL bargraph displays that have two modes of operation. In bar mode all LEDs indicating below the input voltage are on. In dot mode the IC will sequentially light 10 LEDs when a gradually increasing voltage is applied to pin 5. As there is a slight overlap at no time are all the LEDs off. The LED current can be set between 2mA and 30mA with a brightness control.

Supply voltage between 3 and 18V. the ICs are stackable so displays with up to 100 or more LEDs are possible. The LM3914 produces linear steps, the LM3915 produces -3dB steps and the LM3916 produces a Vu scale. (-10dB, -7dB, -5dB, -3dB, -1dB, 0dB, 1dB and 3dB). RoHS compliant.

MAX485E

Maxim DS1305

Maxim

The MAX485E is low-power transceiver for RS-485 and RS-422 communications in harsh environments. Each driver output and receiver input is protected against $\pm 15\text{kV}$ electro-static discharge (ESD) shocks, without latchup. These parts contain one driver and one receiver. The driver slew rate of the MAX485E is not limited, allowing it to transmit up to 2.5Mbps.

The transceiver draws as little as 120 μA supply current when unloaded or when fully loaded with disabled drivers. The MAX485E operates from a single +5V supply.

Drivers are short-circuit current limited, and are protected against excessive power dissipation by thermal shutdown circuitry that places their outputs into a high-impedance state. The receiver input has a fail-safe feature that guarantees a logic-high output if the input is open circuit.

Timekeeping

DS1302

Dallas

An 8 pin DIL real time clock that counts seconds, minutes, hours, date of the month, month, day of the week and year with leap year compensation valid up to 2100. Access is via a simple 3 wire serial interface. 8 x 31 RAM, TTL compatible, dual power supply pins for primary backup power supplies, trickle charge capability.

DS1302	560-050	£1.49	£1.19	£0.99

The DS1305 serial alarm real-time clock provides a full binary coded decimal (BCD) clock calendar that is accessed by a simple serial interface. The clock/calendar provides seconds, minutes, hours, day, date, month, and year information. The end of the month date is automatically adjusted for months with fewer than 31 days, including corrections for leap year. The clock operates in either the 24-hour or 12-hour format with AM/PM indicator. In addition, 96 bytes of NV RAM are provided for data storage. An interface logic power-supply input pin (VCCIF) allows the DS1305 to drive SDO and PF-bar pins to a level that is compatible with the interface logic. This allows an easy interface to 3V logic in mixed supply systems.

The DS1305 offers dual-power supplies as well as a battery input pin. The dual power supplies support a programmable trickle charge circuit that allows a rechargeable energy source (such as a super cap or rechargeable battery) to be used for a backup supply. The VBAT pin allows the device to be backed up by a non-rechargeable battery. The DS1305 is fully operational from 2.0V to 5.5V.

DS1210 nonvolatile controller

Dallas

The DS1210 Nonvolatile Controller Chip is a CMOS circuit which solves the application problem of converting CMOS RAM into nonvolatile memory. Incoming power is monitored for an out-of-tolerance condition. When such a condition is detected, chip enable is inhibited to accomplish write protection and the battery is switched on to supply the RAM with uninterrupted power. Special circuitry uses a low leakage CMOS process which affords precise voltage detection at extremely low battery consumption. The 8 pin DIP package keeps PC board real estate requirements to a minimum. By combining the DS1210 Nonvolatile Controller Chip with a CMOS memory and batteries, nonvolatile RAM operation can be achieved.

PIC16F

PIC12CXXX

8 pin DIP or SOIC microcontrollers having between 512 and 2048 words of program memory and between 25 and 128 bytes of user RAM. 6 i/o pins with on chip oscillator. Max frequency 4Mhz.

Type	Tube qty	Order code	Price each		
			1-24	25-99	100+
PIC12C508A-04/P		560-406	£0.79	£0.67	£0.58

PICKIT 2

The Pickit 2 is a low cost microcontroller starter kit from Microchip providing a quick and easy way to start development from ideas to prototype using a selected range of Flash-based microcontrollers. It supports 8, 14 and 20 pin Flash devices. The kit includes demo board, user guide and MPLAB IDE (Integrated Development Environment) software.

Type	Order code	Price each
Pickit 2	560-490	£39.00

PICAXE

The PICAXE range of microcontrollers are low cost flash memory microcontrollers with a bootstrap code and are programmed using a BASIC language commands. Ideal for education and hobbyists

Type	Order code	Price each
PICAXE08	560-500	£1.15
PICAXE08M	560-501	£1.50
PICAXE14M	560-502	£1.95

PICAXE08 Surface mnt	560-506	£1.75

MegaAVR

Microchip

The Atmel MegaAVR high performance 8 bit flash based microcontrollers with performance approaching 1 MIPS per MHz. By using the same AVR instructions as Atmels ATtiny range easy allowing for easy migration. Self programming flash memory with boot block. 130 powerful instructions. Substantial program and data memory.
