

WASTECYCLE LIMITED

Carbon Management Plan 2011-12

As a business, Wastecycle acknowledges that the Earth's climate is changing as a result of human activity and there is a pressing need to reduce the amount of carbon emitted into the atmosphere as a result of our business activities.

Wastecycle has set targets to reduce the carbon intensity of the service offering to its customers by improving recycling and resource recovery activities by 15% by 2015. Accurate measurement of energy usage and carbon emissions is fundamental to establishing a baseline for future reduction initiatives.

Wastecycle's business is founded on maximising the reuse, recycling and resource recovery of all waste that it handles and manages on behalf of its customers. Therefore, Wastecycle's success in the urban mining of natural resources and minimization of landfill with the ultimate aim of achieving zero landfill is consistent with the aspirations of our customers.

All employees have a vital role to play in contributing to achieving these stretching objectives. Also, Wastecycle will ensure that suppliers and service providers have similar ethics and commitment to the reduction of carbon intensity.

Wastecycle will be pro-active in seeking out innovative solutions for reducing carbon intensity.

Wastecycle will review its performance towards achieving the objectives and will carry out an annual review to take account of best practice within DCC plc. and other environmental businesses.

Our performance together with information on innovative solutions will be communicated to all employees on a regular basis via various means. Posters, signs and reminders will be positioned around our activities to promote good practice in energy and carbon management.

Wastecycle seeks to attain the Carbon Trust Standard accreditation and maintain its status for the benefit of the business and its customers. All employees have a vital role to play in achieving this.
