

Techbee

techbee

Techbee is a wireless system for managing the heating of the house, with this system you can set the hours of operation, temperature and program your thermal heaters with a single finger. Its operation is wireless allowing such a simple installation as screwing to the wall and ready, no wiring of any kind to the heaters.

Begin to enjoy this unique technology of TECENOR and forget the expensive works to put central heating in your home, with Techbee you only need to think of where to put the heaters and the control unit, easily program at your leisure and enjoy the warmth of your home.

LOAD CONTROLLER

What is Techbee Load Controller?

It is the manager of a home electric consumption. It prevents the breaker switch disconnection due to an excess of consumption and prevents that "critical processes" interrupt (i.e. washing machines or refrigerators). It connects or disconnects heaters depending on the consumption of the installation following the priorities set by the user.

Three solutions Techbee for a rational consumption

1st Option

Option A > Load Controller + TB model heaters. Consumption is controlled according to the switching-on devices in the house.

2nd Option

Option B > Central Unit + DOMO model heaters. All the heaters are comfortably managed from the Central Unit.

3rd Option

Option C > Load Controller + Central Unit + DOMO model heaters. All the heaters are managed from the Central Unit and consumption is controlled according to the switching-on devices in the house.

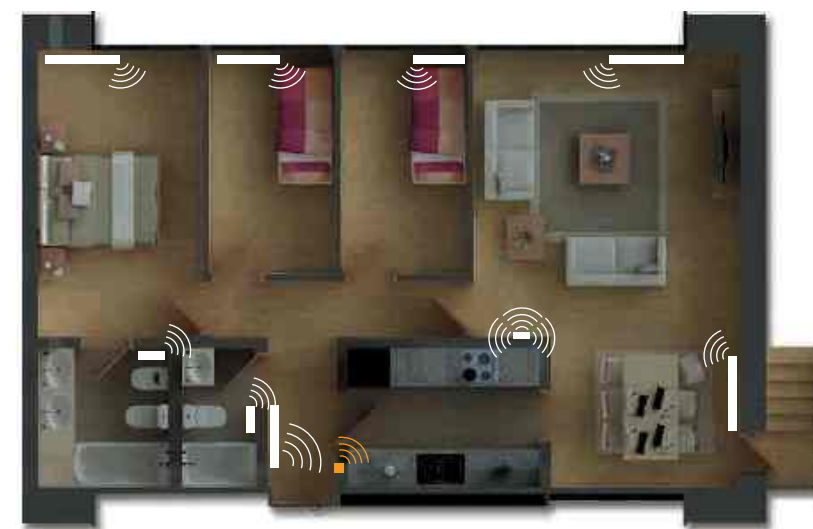

TWO solutions adapted to your needs

1. Individual

Each radiator which its own control and different options: analogical, digital thermostat and programmable thermostat. As well as accessories as: Remote control and analogical load controller

2. Centralized Wireless

Techbee Technology

Heating Circuits

Technical innovation for wireless heating circuits Techbee

Environmentally friendly

model One

Analogue mod.

Temperature regulation by analogical thermostat.

Programmable mod.

Regulation by digital electronic chronothermostat. Backlight LCD screen. Simple and intuitive programming.

Digital mod.

Regulation by digital electronic thermostat. Backlight LCD screen.

model Style

Programmable mod.

Regulation by digital electronic chronothermostat. Backlight LCD screen. Simple and intuitive programming.

Digital mod.

Regulation by digital electronic thermostat. Backlight LCD screen.

model Fine

fine

Common features

Aluminium radiator
Steel armoured heating elements
Solid refractory compound TEC (Tecenor Ecological Compound).

Analogue mod.

Temperature regulation by analogical thermostat.

Programmable mod.

Regulation by digital electronic chronothermostat. Backlight LCD screen. Simple and intuitive programming.

Digital mod.

Regulation by digital electronic thermostat. Backlight LCD screen.

model Towel Dryer RST 500

Common features

Aluminium radiator.
Steel armoured heating elements.
Solid refractory compound TEC (Tecenor Ecological Compound)
TECENOR exclusive regulation that will allow you to control all the hours of operation and the desired temperature in your room.

Analogue mod.

Temperature regulation by analogical thermostat.

Programmable mod.

Regulation by digital electronic chronothermostat. Backlight LCD screen. Simple and intuitive programming.

Digital mod.

Regulation by digital electronic thermostat. Backlight LCD screen.

Decoration and colours Exclusive NEW

We manufacture our radiators with different exclusive design motifs to customer's taste.

Customize your radiator with the color that suits your decoration or choose one of our large samples book.

5

Reasons for choosing a TECENOR radiator

- 1 No odours. Environmentally friendly and biodegradable because as we do not use fuel we do not create waste.
- 2 Operation without noise.
- 3 No maintenance or possibility of leakages.
- 4 Maximum efficiency, all consumed energy is translated into heat.
- 5 Uniform distribution of temperature.
