

Retail premises – modular and cabins:-

Flat-packed modular and cabins make a viable option when retail operations need to meet customer demand and expansion plans.

The disruption caused during conventional build programmes can have adverse effects on daily operations.

Flexible space can be added with little disruption and within a far less period of time thus enabling outlets to meet demand and see a return on investment quickly.

The modern appearance of the Containex system blends in with most current retail designs with the option of utilising bespoke panelling/glazing to further enhance or promote the sales proposition.

Typical uses for cabins and modular in retail are:- News kiosks, beauty parlours, hairstylists, and general convenience stores.

Single or multiple bays can be used as waiting rooms at transport hubs and / or to facilitate car hire on airport car parks etc.

Some benefits of using Containex Cabins and Modulares from PMS Ltd are:-

- Modern panelling improves aesthetics and can be tailored to enhance or promote the venture
- Wide size range to cater for small enterprises up to larger retail overspill needs
- Flat-packed system enables the opportunity of utilising previously overlooked areas as profitable retail space
- Flexibility of the systems allow for rapid insertion of bays to cater for real time expansion
