

Project –Education Sector - Large Nursery:-

The flexibility of using the Containex system on the above project enabled the client to overcome substantial logistical concerns with regards to transport and craneage access.

Furthermore, as the system is available in a standard size range, the lead-time of the project was reduced thus enabling the authority to bring forward much needed school places for local children.

The relatively “low stance” of the erected building combined with optional hard-wood fascias and trim enabled the structure to blend sympathetically with its surroundings.

The bright and airy internal panelling makes for a spacious and inviting teaching space.

Some benefits of using Containex on this project:-

- Standard sized modular bays were used to allow the project to be brought forward which resulted in much needed “seats” being available to alleviate local authority pressures.
- Flat packed system is “man-portable” which enabled the more complex areas of the installation to be completed without the use of heavy lifting and delivery equipment, furthermore the flat-packed nature meant that space previously in-accessible was opened up and utilised.
