

Whether the project is on an existing site or perhaps a greenfield/brownfield development, the containex modular and cabin system is an ideal choice.

The system can be configured to meet the needs of project professionals and provide all the office and welfare amenities expected upon large scale developments or indeed remote sites.

From executive offices through to heavy use site offices, canteen and welfare facilities the system is proven and reliable.

Furthermore, the flexibility of the flat-pack system reduces the logistic hassles of transporting pre-build cabins and modular through arduous terrains. For example, via woodland track or temporary road surfaces to reach hillsides or exposed areas for wind power generation.

The ability to use single transport for multiple flat-packed bays as opposed to large convoys reduces the risk of premature road-wear and damage due to obtrusions and dense woodland.

These factors also assist when the temporary site needs to be re-deployed elsewhere.

Benefits associated with flat-packed from Portable and Modular Services Ltd:-

- Robust yet aesthetically designed product
- Flexibility to meet your project needs where future expansion is a possibility

Available in a wide colour range to blend sympathetically with surroundings or perhaps corporate livery
