

With demand for healthcare facilities being rapidly on the rise, the need to provide adequate buildings quickly is of paramount importance.

The use of modular buildings to meet this demand is a viable and cost effective way of delivering this service.

Whether the brief is to provide overspill waiting rooms for A&E or perhaps larger walk-in-centres, modular buildings can be configured to suit.

White, wipe-down internal panelling promotes bright and clinical consulting rooms and if needed a somewhat “toned-down” colour scheme can be tailored to meet the needs of the practice.

Rapid deployment of modular buildings reduces the disruption associated with conventional building works thus enabling the availability of work space to be a real-time proposition.

As the buildings require minimal fit-out with regards to waiting rooms etc, patients can be processed within a few hours of completion of installation.

Some benefits of using Modular buildings and cabins from Portable and Modular Services Ltd are:-

- Rapid deployment of modular and cabins
- Bays can be configured for open plan areas or partitioned consulting rooms
- Single bays right up to multi-storey facilities can be designed.
