

Decra-Stone

Non-permeable resin bonded gravel treatment.

Uses

Decra-Stone Surfacing System is a resin bonded surface dressing designed to give a hard wearing decorative finish to driveways, footpaths, patios and many other areas. Decra-Stone gives an effect similar to a gravel finish but with the advantage of the aggregate being bonded to the surface, meaning very little loose stone or chippings. Available in a variety of colours and sizes, a wide range of finishes are achievable to suit any project.

Description

Decra-Stone is designed for application to asphalt surfaces. For applications to concrete, metal or wood surfaces, a primer is required. Decra-Stone is supplied as two separate components, which are mixed, spread, and then a choice of decorative aggregate is broadcast onto the surface. The resin is then allowed to cure.

Advantages

Epoxy Resin Based – excellent adhesion to:

- Asphalt
- Concrete
- Steel
- Wood

Fast Cure – ready to receive vehicular traffic in hours

Durable

Excellent abrasion resistance and resistant to:

- Petrol
- Diesel
- Chemicals
- Salt

Durability

Decra-Stone should have a service life of between 8 – 15 years depending on traffic levels.

Contracting Service

HMS Limited offers a contracting service for the application of all their products. This facility is backed by a comprehensive technical and after sales service.
