Economy Range

Budget Range

without compromising quality

deal for use on affordable housing and price sensitive sites, this strong, effective range of mailboxes are extremely competitive and offer a quality solution.

Banked to your specification, arriving on site ready to install. Unlike many budget products currently on the market, this range offers longevity, durability and does not compromise on quality.

Available for on the wall, in the wall and freestanding applications in vertical and horizontal arrangements.

Our reputation is important to us and we strongly believe quality is affordable. Conforms to EN 13724.

DOMESTIC EUROBOX HI STEEL 1 STEEL 2

Classic Range

Classic Range
suitable for any application

This extremely popular group form our core range which are of a welded construction.

Manufactured from aluminium and zintec steel this group has master suited lockable mailboxes for any application on, in, through the wall and freestanding.

Finished with attention to detail and high technical specification, this range is suitable for any application. Fully assembled and banked ready for installation. Integration of door entry systems, lighting, name plates, engraving, branding, stands, trims and a variety of locking options available on this range. Conforms to EN 13724.

Panel Boxes

Panel Box straight or sloping

Panel mounted boxes are ideal to replace a glazed screen adjacent to a front door / entrance. The panel neatly houses the door entry system and mailboxes, whilst fitting into the beading, it produces an effective and popular solution to ensure maximum security.

The panel boxes are available in straight or sloping options and enable developers to design a great solution in the tightest of locations.

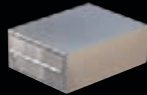

Not even the postman needs access to the building using this system and the residents do not need to exit the building to retrieve their mail.

- Suitable for side screen & through wall applications
- No size restrictions
- Panel & mailboxes available in any RAL colour
- Standard lockable door
- Door entry equipment housed as options
- Optional signage / engraving available
- Conforms to guidelines in New Homes Guide 2010

Vertical

Horizontal

Stainless Steel

Stainless Steel
for a feeling
of luxury

Designed and manufactured to offer a high quality affordable mailbox in a horizontal and vertical.

We offer 2 options: fully stainless steel ie. Carcass and front face 100% manufactured from stainless steel, creating a solution for freestanding, wall mounting and to ensure the finish carries

through internally, or alternatively we offer a budget option whereby the body or carcass is made from steel and the front face is stainless steel. A suitable solution for those applications whereby the boxes are built in or recessed and the body is not visible.

Trims and additional features are available as required providing the ultimate in finishes.

Wood Inserts

A popular and visually impressive part of our range is the wood insert. Splitting a bank horizontally and vertically, cladding the exterior or providing a parcel shelf, the mix of wood and metals adds a complimentary and pleasing involvement of sustainable materials within the bank of mailboxes.

Wood used includes Walnut, Cherry, Bamboo, Oak and Sapele, all of which can be stained (or not), to suit the customer's requirements.

We offer a full carpentry solution of the highest quality, to adorn any prestigious development. Alternatively we can work with your joiners on-site, providing dimensions and drawings to enable them to incorporate the mailboxes into their arrangement.

*Use sustainable materials
in your design*

Bespoke

Turn your vision
into reality

Prestigious developments & postal authorities have taken full advantage of our bespoke facility, and we have had the pleasure of working on some of the worlds most high profile developments working alongside the most respected architects, designers and developers.

We can turn your vision into reality...

Our joiners can source and create amazing wood features of an extremely high standard. We can create a bank of mailboxes unique to your dimensions and requirement.

We will provide 2D & 3D fully rendered drawings and work with you to provide an interesting and aesthetically pleasing arrangement to adorn the most challenging of developments, for the most discerning clients.

We had great pleasure in creating a bespoke solution for the Armani Residences at the Burj Khalifa, Dubai; the World's Tallest Building. Our site meeting with architects Skidmore Owings & Merrell enabled us to fully understand the brief and standards required. We delivered a bespoke and suitably impressive solution for such a prestigious and high profile development.

Alison Orrells Safety Letterbox Company CEO

Fire Rated

At The Safety Letterbox Company our Research and Development team worked with Exova Warrington to become the first company to achieve full Fire Rating (one hour integrity only) to BS 476 Part 22, on this specifically created group of products.

We have worked continually with the market to understand the Fire rating demands on projects, and consequently have produced an alternative to our high level product for those sites where products can conform to BS476 Part 6 & 7. This standard typically tests the material that the product is made of to see if it will 'fuel a fire', whereas Part 22 will contain and form a break to a fire and the box or bank of boxes will maintain its integrity for one hour ie. will not allow breakout.

BS 476 Part 22 This group of products contain a series of features and benefits that result in a 'one hour integrity' rating. As a result of complex features, this product range is the more costly option.

BS 476 Part 6 & 7 This group will satisfy the demands of fire protection in most cases, and provide an affordable alternative if surface spread of flame and non flammable materials are acceptable.

All products achieving these standards are polyester powder coated to London Underground Engineering Standard 2-01001-002 for surface spread of flame.

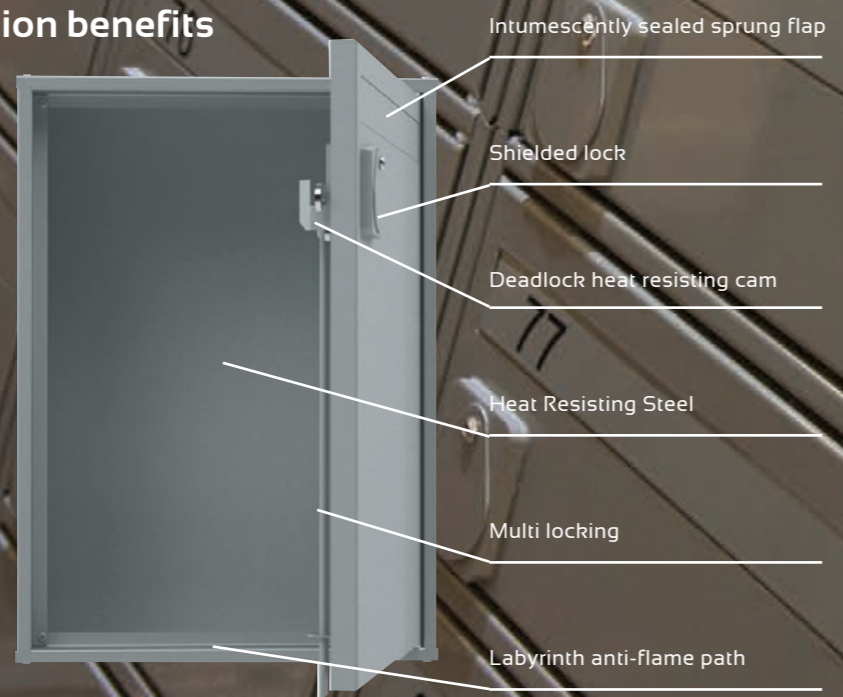

Fire Rated range

We have 2 groups of Fire Rated mailboxes to suit the location and requirement on each project. Each group contains mailboxes for surface mounting, recessing, freestanding and through the wall applications.

It is important that the buyer or specifier is clear about the mailbox locations when selecting the correct fire rated mailbox for the project, as choosing a lesser standard may disable the rating of an area and deem the property vulnerable.

Key fire protection benefits

Fire rated mailbox to BS476 part 22 (1 hour integrity only)

Social Housing

The demands on a social housing site can be challenging. We have a group of products designed with this in mind. Fitted with a range of additional security and strengthening features, they ensure the mail is protected.

Heavy duty models, restricted apertures and anti leverage details, high security locking and anti vandal door entry equipment are all available to create the most suitable arrangement to fit its location. Fire Rated and secured by Design solutions available.

Robust and secure even in the most demanding of environments

Student Accommodation

One of the larger users of multiple mailbox systems are the colleges and universities of the UK and worldwide. Over the years The Safety Letterbox Company have been at the forefront of this market and have been involved in a large number of projects.

We have had the pleasure in supplying Universities such as: Aberystwyth, Bangor, Chester, Exeter, Imperial College, Limerick, Liverpool, Nottingham, Portsmouth, Sussex, Warwick and many more.

A variety of mailbox options and sizes are available with larger capacity boxes for shared occupancy and also unlimited multiple keys per box.

Locking options such as SALTO systems can be incorporated into the mailboxes to provide traceability and removing the issuing of keys each year.

Where price is of primary concern whilst not wanting to compromise on security and aesthetics, the budget range offers an excellent alternative to our standard and high specification boxes.

The affordable 'budget range' of lockable mailboxes manufactured from steel and PPC, will allow purchasers the best product at the most commercial, affordable price.

Use of colour can also create a visually interesting area to enhance the interior design.

We can also visit to measure for maximum use of space if needed and our installation team can provide a full turnkey solution.

“From our initial enquiry when we decided to install 280 secure letter boxes in one of our halls of residence, Safety Letter Box Company were able to advise us what options were available in the space we had. I was impressed that the installation team sent someone to visit the site prior to the installation to assess where they were to install the boxes and if there were any access issues, parking arrangement, waste disposal etc. The boxes were to be installed in a Common Room which was being used as a reception area for our summer guests. On the day of delivery the Installation Team worked in the area with minimum disruption. They were conscious that they had to remove any debris and keep the place tidy while carrying out installation”

Senior Village Manager, Accommodation Services, Imperial College London

PO Boxes

For projects where a full post room is required, there are a number of options. For those that require sorting of the mail on one side via pigeon hole type arrangements and lockable doors on the front face, such as projects completed for Kuwait Post Royal Mail, also Mount Pleasant Sorting Office, Royal Mail, London through to a complete room fit-out maximising every bit of space for the concierge or post person to sort mail.

Maximising
every bit of space

Using colour for aesthetic appeal

Think outside the box
Bring in the colour

Mailboxes needn't be just functional. Turn your vision into reality. Incorporate colours from the project scheme, corporate colours or create a bespoke, visually stimulating arrangement to adorn a wall or lobby.

As bright or as subtle as your project demands, we will produce the most stimulating and aesthetically pleasing arrangement.

- Over 100+ RAL colours available
- Any existing finishes matched
- Any numbering or lettering
- MATT or GLOSS
- swatches available as required
- Stainless steel & copper finishes
- All polyester powder coating produced in-house

A strong durable finish

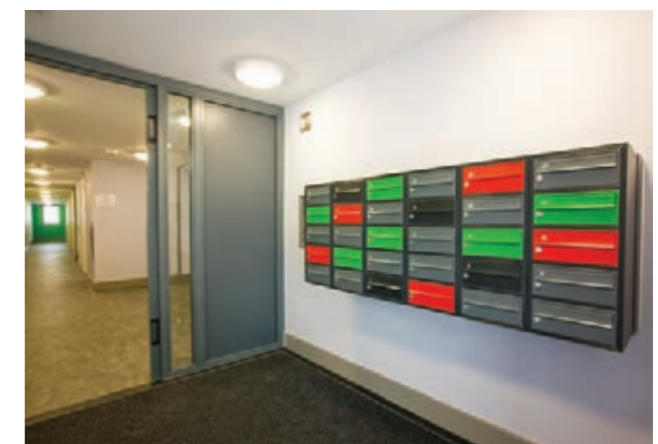

Our in-house polyester powder coating process provides excellent anti-graffiti and stain resistance properties with high aesthetic appearance.

We use a three stage pre-treatment process on all powder coated surfaces to ensure maximum adhesion resulting in longevity and durability of the finished product.

We powder coat to a depth of 75/100 microns. Sample tested to 1,200 hours salt water spray.

Anti Graffiti Powder Coating

All mailboxes can, in addition to the standard 'extralife' coating, be further protected by an additional coat of 'anti-graffiti' lacquer.

Secured by Design

Secured by Design is the official UK Police flagship initiative supporting the principles of 'designing out crime'. Secured by Design focuses on crime prevention of homes and commercial premises and promotes the use of security standards for a wide range of applications and products.

Call us for advice and the latest news on this initiative

The principles have been proven to achieve a reduction of crime risk by up to 75%, by combining minimum standards of physical security and well-tested principles of natural surveillance and defensible space.

We are currently working alongside ACPO with our knowledge and experience of the market demands, with our total support and dedication to providing a range of commercially viable practical and affordable products.

At the Safety Letterbox Company we have great pleasure in providing practical, affordable and effective solutions to support this initiative.

Extract taken from Section 21 of The New Homes Guide 2010

21.19 Letter Boxes

A surface mounted or 'through-the-wall' letter box may be used. The use of such a product greatly reduces the crime risk problems associated with letter plates and also reduces heat loss through the door.

21.19.1

Where a single surface mounted letter box is to be used for each dwelling they must be robust in construction and securely fixed to the external face of the building in accordance with the manufacturer's specifications. They must be located in a position that benefits from natural surveillance. The letter box must incorporate a design feature that prevents the removal of mail through the delivery slot and the access door for mail collection must be lockable.

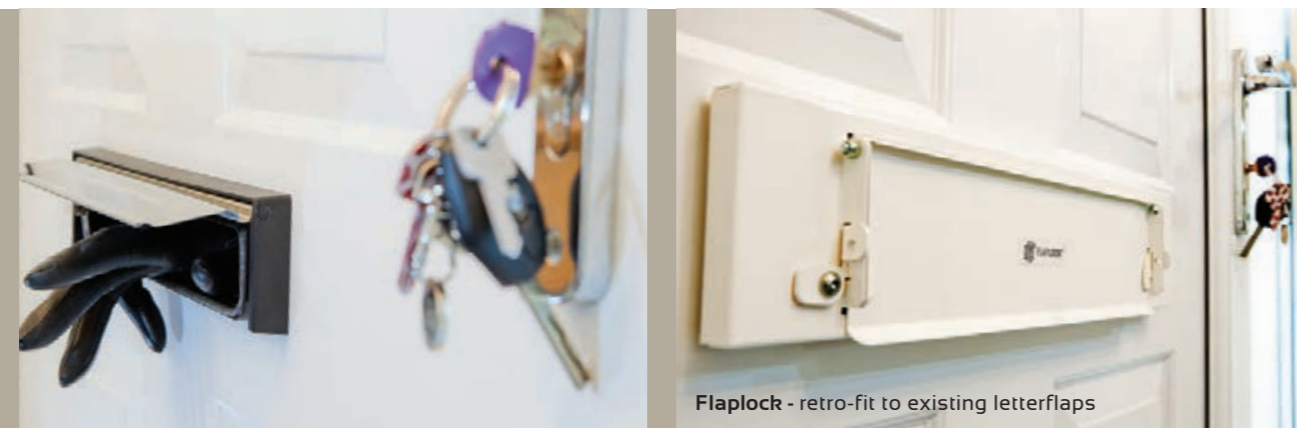

21.19.2

Where multiple boxes are to be used within the entrance hall of a block of flats, the boxes

must incorporate the same design features as single boxes and be installed in accordance with the manufacturer's specifications. Depending on crime risk it may be necessary for such letter boxes to be located within an 'airlock' access controlled entrance hall (pictured above), whereby access can be gained by the postal worker through the outer door only. If this additional requirement is necessary the CPDA will advise the applicant in writing at the time of application.

21.19.3 Through the-Wall

Where the design dimensions of an entry hall in a block of flats are sufficient it may be preferable to provide 'through-the-wall' mail delivery into a secure internal letter box, thereby negating the need for the postal worker to enter the building (as shown on page 14). Such a box must incorporate the same design features as described above for a surface mounted box. Anti-arson design features may also be advised if such crime risks are present.'

Ask our technical team for information of the latest developments in this area. One such straightforward and effective solution are Gap restrictors.

On developments where vandalism and theft of mail is of concern, we can reduce the aperture of the mailbox by fitting a gap restrictor to our products either factory fitted or retro fitted in minutes. All our mailbox models are manufactured with the facility to retro fit as required.

Speciality

Bringing you the very best solutions in our speciality group of products;

- Chuted and purpose made
- Heavy Duty
- SALTO
- Key mail box & prescription mail box combo's

This group provides a fully comprehensive range of mailboxes to satisfy the most challenging of requirements with a vast selection of sizes and solutions for literally any requirement.

Speciality Range
for special requirements

Individual boxes

We offer a huge selection of individual boxes to suit every site, profile and budget enabling developers to remove the traditional letter flap from the door and providing greater security to the occupier.

Simply wall mounting or post mounting a single mailbox provides a safe and attractive receptacle for mail whilst not compromising on security.

Ask our technical team for details on the full range of designs / sizes & colours

As individual
as you are

Security

Sadly in an age of identity theft and other crimes, we are continually looking at ways to provide maximum security of mail and the properties. This has been addressed in a number of ways described below.

Locks - the locks used are unique to Safety Letterbox Company, we do not display numbers on the front face and the ordering and cutting of spare keys are handled via our internal key department who handle enquiries in accordance with strict policies and procedures.

Features - most of our mailboxes have a series of security features such as the anti vandal bridge, recessed doors to remove the leverage ability and the specification of materials used ensure that the doors and flaps are not easily damaged.

Fire Extinguishers - Where risk is considered high, mailboxes can be fitted with a fire extinguisher. Originally designed and created to protect racing car drivers from fire, 'pyroflex' is an unobtrusive tube which is fixed to the inside of the mailbox. In the event of fire, the heat generated softens the tube which punctures at the hottest point, (approx 80°C) accurately releasing the gas into the seat of the fire which extinguishes the fire at source.

Flaplock - For that extra peace of mind the lockable letterflap 'Flaplock™' has been created by Safety Letterbox Co following demand from Arson task force teams across the UK to retro-fit and block up existing letterflaps in doors of apartments or front doors, providing the option to lock or unlock as required. Fitted in seconds, this affordable solution is ideal to provide security to those living in fear of arson attacks, intimidation and other crimes.

We also offer a range of heavy duty mailbox models to provide additional security in the most challenging of site locations.

Flaplock

Locking Options

Maximising levels of
secure
protection

All our mailboxes are lockable complete with 2 keys each as standard, master suited. We use CC locks that are unique to us, which eliminates the obtaining of keys through dishonest means.

In exceptional circumstances, where the door size may be abnormally large, or, the level of security required is higher than normal, a 2 point or even 3 point locking option can be made available to most of our range of mailboxes.

We have a variety of locking options alongside our standard, incorporating electronic options like SALTO to integrate into existing systems and other electronic locks which include the latest biometrics as required. This also includes electronic notice boards, controlled centrally.

These mailboxes will protect against mail theft and identity fraud, provide increased security and access control to individual mailboxes with full traceable entry. This eliminates the need and expense of having to reissue replacement keys to students as they will be able to operate and access their mailbox with their existing student ID card and room key. Digital locking is also available.

Innovation

Pushing the boundaries

Our Research & Development Department are continually looking to push the boundaries with integrated technology and improved facilities for our customers. We now offer a wide range of exciting opportunities to really provide the end user with the most effective solutions and the control and communications required in this age of technology.

Exciting products we are now incorporating into our mailbox arrangements include:

Display panels / electronic noticeboards - without any need to move from your PC, the sleek and stylish display panel allows you to update residents in an effective way eg. "Lift Maintenance Today 2 - 3pm" or used as advertising space generating income eg. Local Taxi / Tradesman / Promotions

Door entry / intercom systems - these can transmit the image of the visitor to residents mobile phones and TV, removing the tradesman buttons

Key safes - easily manage keys stored on site - provide access for authorised people remotely

iD - Engraving & Vinyl

Digits, letters, logos - whatever you need to iD the boxes or promote your company. We can engrave or produce vinyls to suit.

With our in-house CNC engraving facility, we offer a fully versatile approach to mailbox identification. Mailbox flaps, doors, panels and cladding can be adorned to individual customer requirements.

Sir Francis Drake Court. 47 Banning

INTEGRATED COLOUR SCREEN DISPLAY

- ✓ No more paper notices in your lobbies
- ✓ Ideal for notifying / Informing residents
- ✓ Time Saving - no more on-site visits
- ✓ Advertising opportunities
- ✓ Optional integration into mailbox banks

SITE KEYS via KEYSAFE

- ✓ Highly robust design
- ✓ Powered opening for maximum security
- ✓ 3 hooks for all formats of keys
- ✓ Audible alarm if safe not shut in time
- ✓ Optional integration into mailbox banks

Electronic locks - a totally flush and sleek look, removing any visible locking feature and the option of removing the letterflap to provide the ultimate featureless bank of mailboxes with maximum security. This ultimately innovative solution provides architects and developers with the availability to create a wall of 'hidden' mailboxes.
