

Contracting

Safe, reliable and sustainable solutions for highways and infrastructure

National capability

Local focus

Aggregate Industries produces and supplies a wide range of construction materials including aggregates, asphalt, ready-mixed concrete and precast concrete products. We operate one of the highway service industry's largest and most dynamic businesses, pioneering developments in safety, sustainability, whole life quality and best value options.

Contracting

We have over 80 years of experience in highways maintenance, road surfacing construction and associated civil engineering services including public realm enhancements, traffic management and hydraulically bound materials.

Our major projects team manages the delivery of major national schemes; often combining contracting with our aggregates, concrete and asphalt divisions into an integrated service dedicated to the successful delivery of our customers' needs.

We operate nationally but are sensitive to local markets in the key areas of:

Highway surfacing

Civil engineering

Traffic management

Composite pavements

Highway surfacing

We have decades of experience in delivering the highest quality pavement solutions and can often create savings through alternative design or construction methods.

Traffic management

Our specialists ensure UK wide highway construction safety by installing and maintaining essential temporary traffic management systems.

Civil engineering

Our civil engineering team provides support and resources to our highway surfacing team. Our capability includes full highway construction, urban public realm and airfield construction across the UK.

Composite pavements

The onsite production and construction of cement bound pavements, often using locally won or recycled aggregates, provides our customers with a truly local and sustainable construction alternative.

Responsible in everything we do

We place the highest importance on the health and safety of our workforce and those we work with. In fact, safety and sustainability are our number one business priorities.

Safety

We are committed to maintaining the highest standards of safety by devoting the human and capital resources necessary to create a working environment in which our people can work without injury or illness.

Throughout our business we have established a deeply embedded safety culture; focusing upon the single idea that no-one's health should be put at risk by what we do.

The Responsible Source™

As a supplier and manufacturer to the construction industry, we have been working for more than a decade to create sustainable solutions for all our core markets.

We have been addressing issues such as health and safety, quality, ethical trading, carbon and water management, biodiversity, and social responsibility. This work has culminated in us becoming the first company in the world to be certified to BES 6001, Framework Standard for Responsible Sourcing of Construction Products, by the Building Research Establishment (BRE). Today, all our products are certified as EXCELLENT under the BES 6001 standard.

BES 6001

Responsible Sourcing

www.greenbooklive.com

Our scheme on the A38 in Glynn Valley was awarded a Green Apple Award by the Green Organisation, as well as a Sustain Award in the category for 'Property and the Built Environment'. Both of these awards recognised our work towards minimising environmental risks and the innovative solutions we provided.

Sustainability

Sustainability is at the core of our business strategy, and we have developed a wide range of approaches to sustainable construction. These include:

Life® A range of innovative and sustainable material solutions.
For more information please visit www.aggregate.com/life

Material production methods using site won and reclaimed materials

Use of state of the art machinery to maximise energy efficiency with minimal emissions

We measure emissions, energy usage and waste as part of our key performance indicators. This has also been adopted by some of our key supply chain partners, enabling further savings

The use of mobile asphalt recycling plants to recycle existing asphalt surfacing into new base and binder courses for footways and minor highways

Construction of housing code level 6 within the Code for Sustainable Homes

Hot recycling

We have invested in mobile recycling technology to maximise opportunities to recycle road planings back into usable asphalt. These fully mobile units deliver savings in terms of reduced waste, reduced carbon, reduced use of primary aggregates and, particularly in the framework environment, enable material to be recycled back into the originating contract. This initiative is enabling us to deliver sustainability targets with direct measurable benefit for our customers.

Highway surfacing

Safe, reliable and sustainable solutions for highways and infrastructure

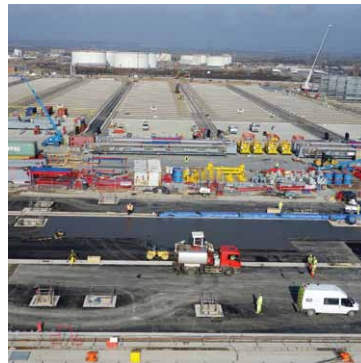

We have grown into one of the construction industry's largest and most dynamic surfacing businesses, pioneering developments in safety, sustainability and whole life quality which benefit not only the end users but also our customers and the industry as a whole.

We are constantly seeking ways in which we can create added value by going beyond standard industry practice to find innovative solutions for cost reduction and sustainability improvements. We always aim to provide customers with complete flexibility and a choice of solutions throughout the design, tender and even during the construction stage.

This is accomplished thanks to the synergies of our extensive range of capabilities as a supplier and contractor, and the superb specialist knowledge we have gained through years of getting it right first time.

We possess the necessary flexibility to undertake long term frameworks alongside regional individual projects. We have access to a full range of modern surfacing materials and we have the technical expertise to advise our customers on the alternatives available to them; backed up by extensive research and development at our dedicated facility.

Key services in this sector include:

- Motorway, urban and rural highway maintenance
- Design and build road and highway construction
- Airfield construction and maintenance
- Term maintenance contracts and car parks

Civil engineering

Integrated solutions for civils projects throughout the UK

A national business with local people delivering innovation and commitment to our customers.

We have an excellent team of civil engineering operatives and resources which support and improve our highway service provision. This team undertakes construction projects within the urban space, airfield, ports, industrial, commercial and retail sectors.

We utilise the highest quality in-house products and resources to provide the best value and quality to our customers, creating industry leading sustainable built environments throughout the UK.

Our landscaping and ready-mixed concrete businesses offer innovative and unique product solutions, as well as ensuring excellent supply chain control. Our customers benefit from a fully integrated supply chain; providing enhanced quality assurance and simplifying the management process.

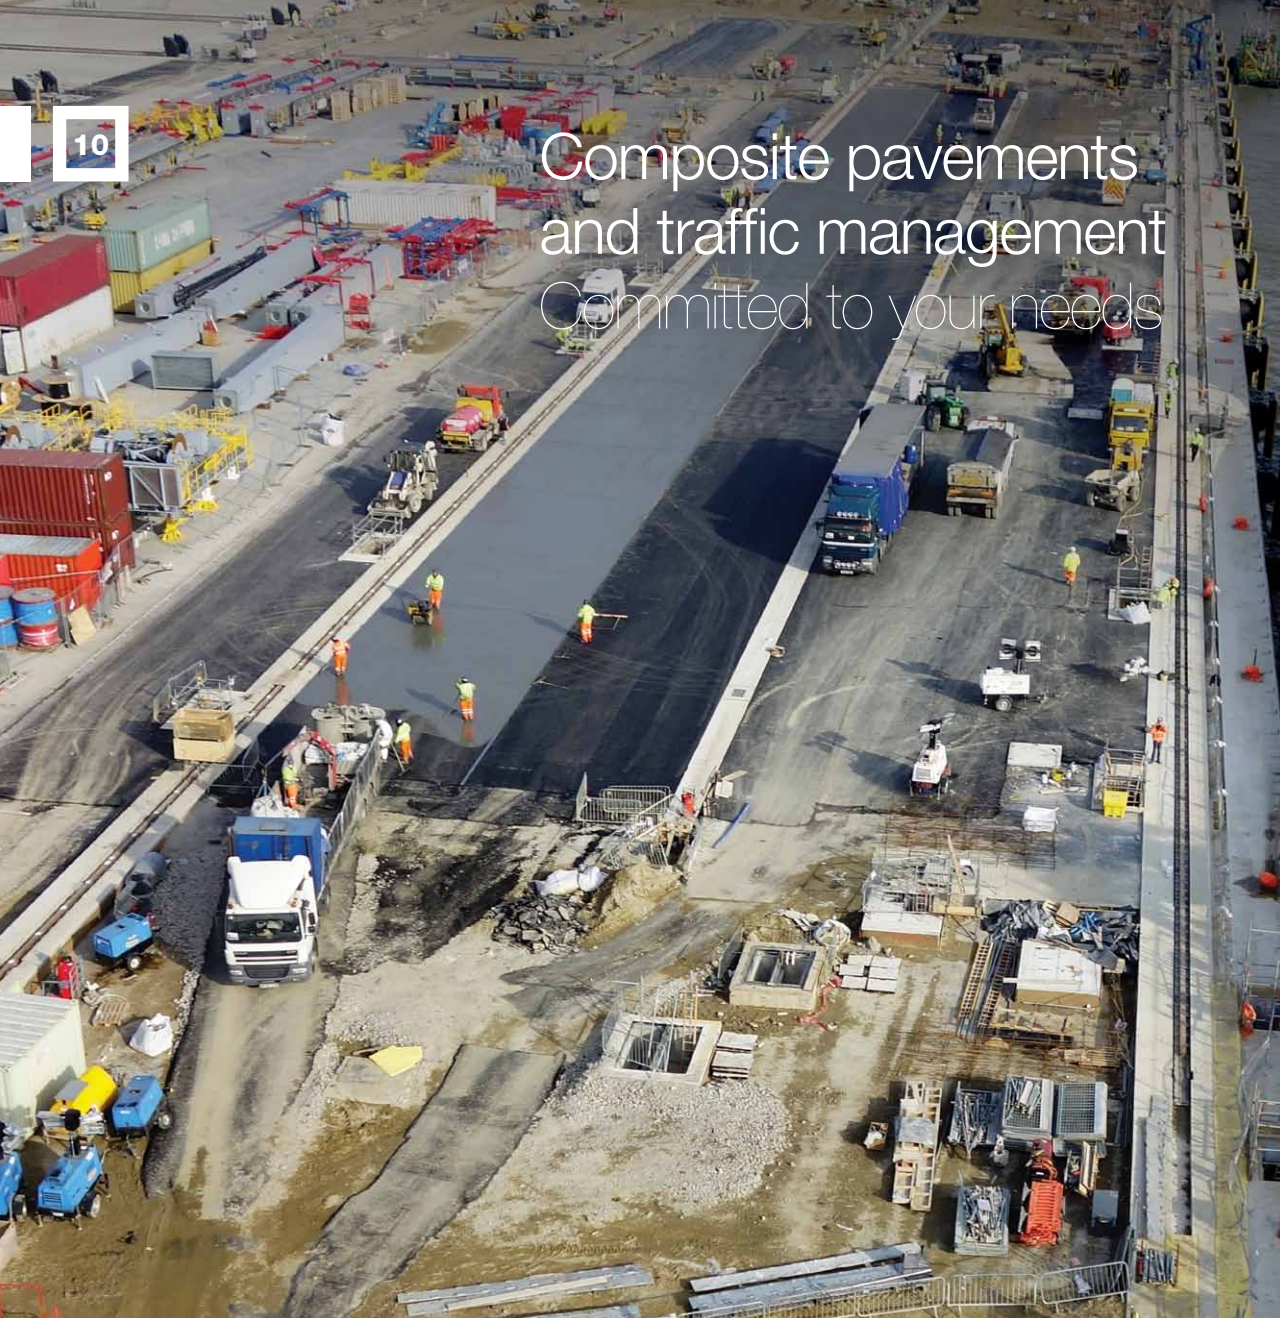

We work with our customers to ensure that the service we provide fulfils their expectations and delivers on safety, quality, cost and programme through collaboration, innovation and attention to detail. Working together enables an effective, proactive approach to project management that delivers success.

With over 80 years' experience in providing the highest quality highway construction and civil engineering solutions for a wide range of clients, you can be certain that we are committed to your needs.

Composite pavements and traffic management

Committed to your needs

Composite pavements

Safe, reliable and sustainable alternative pavement solutions.

With the ability to produce bound materials onsite using site won or reclaimed aggregates, re-crushed concrete or tar bound material, we can significantly help you improve the sustainability of your project.

Our versatile internal resources allow us to provide complete flexibility to the customer in both mobilisation time and programme duration, consistently achieving output volumes which create savings.

We are able to provide consultation on all aspects of each project, from material specification to construction design characteristics which meet the individual requirements of the scheme.

Traffic management

Ensuring a safe highway working environment.

As a founding member of the Traffic Management Contractors Association and Sector Scheme 12A, 12B and 12D accredited, we are one of the largest traffic management providers in the UK. We pride ourselves on the way we deliver traffic management solutions and remain at the forefront of innovation within the industry.

We have extensive experience in providing temporary traffic management to large regional frameworks, significant highways schemes and smaller short term regional maintenance contracts.

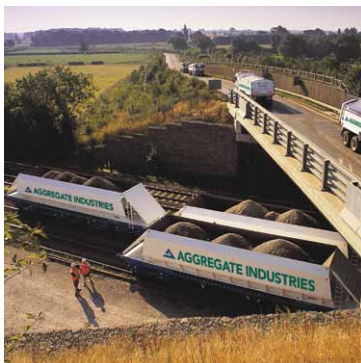

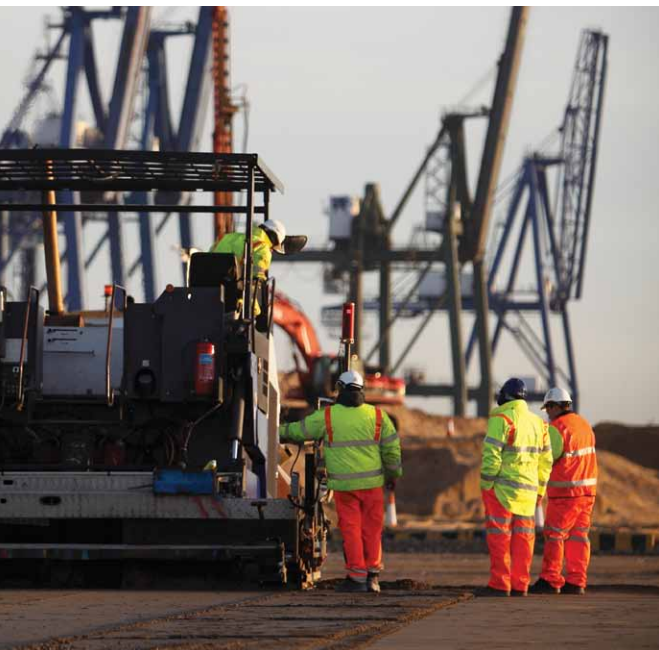

Our key services include the design implementation, installation and maintenance of temporary traffic management, including temporary barriers, CCTV, vehicle recovery and speed enforcement.

Key services in this sector include:

Reducing the use of virgin aggregates

Lowering vehicle miles and therefore carbon emissions

Creating significant reductions in the volume of waste sent to landfill

Investing for the future

In what are challenging times for the infrastructure and highways industry we continue to invest in the development of technology to improve sustainability, reduce waste and deliver a higher degree of quality assurance than previously possible.

Integrated Spray Bar pavers are delivering guaranteed tack coat coverage, with reduced waste, fewer operations and allow the use of stronger tack coat emulsions.

Bar-tec® by MOBA provides real-time telemetry on the paving operation eliminating uncertainty over material parameters and weather conditions and allowing remote monitoring of the complete operation; giving our customers the highest level of quality assurance possible.

Mobile recycling technology is enabling us to maximise opportunities to recycle road planings back into usable asphalt. These fully mobile units deliver savings in terms of reduced waste, reduced carbon and reduced use of primary aggregates. This enables us to deliver sustainability targets with direct measurable benefit for our customers.

Aggregate Industries

The complete service

Aggregates

We supply crushed rock, sand and gravel, stone and fill materials for construction. These can be delivered by road, rail or marine transport. We also produce silica and specialist sands.

T: 01455 285 200

Hard landscaping

Flag paving, block paving and kerb products are available in both concrete and natural stone. Surface water drainage and SUDS are also part of a wide ranging product portfolio.

T: 01335 372 222

Asphalt and surfacing materials

We are a leading supplier of a full range of coated materials with over 50 locations in the UK, serving major conurbations, including sites for collect business.

T: 01455 288 222

Masonry, walling, roofing and cast stone

We produce decorative masonry building blocks, reconstructed stone walling, architectural cast stone dressings and roofing slates.

T: 01285 646 884

Bespoke and specialist precast concrete

We manufacture tailor-made and bespoke concrete products for use in construction and building structures including power applications.

T: 01455 288 275

Ready-mixed concrete

We offer a complete range of ready-mixed concretes and screeds, operating from over 90 sites. We also have an operation that caters for smaller collect loads.

T: 01524 736 933

Flooring

We supply precast concrete products, including beam and block flooring, hollowcore flooring, specialist flooring, stairs and landings throughout the UK.
