TruDepth Standard

Best value spun-bonded, true depth filter

60°C

Polypropylene

SPECTRUM™

The SPECTRUM TruDepth spun-bonded polypropylene filter is the durable single-use cartridge offering the best all round protection in terms of functionality and cost.

Specifically designed and manufactured for resistance to a wide range of chemical solutions, TruDepth Standard is constructed from polypropylene containing no anti-static agents, solvents or binders to deliver broad compatibility and batch traceability with no additives to contaminate the filtrate.

Its single-use design means it can be easily disposed of - incinerating to trace ash while releasing no hazardous by-products.

Designed to be of robust construction using FDA approved materials, the TruDepth is an ideal pre-filter in its standard 2.5" and 4.75" large diameter formats, where water supplies have been problematic or where particle removal size is unknown.

Constructed from a strong, self-supporting structure and with high chemical compatibility, TruDepth will not deform under pressure or contaminate the filtrate by unloading particles, additives or migrate media into the stream.

These features, coupled with a state-of-the art construction, delivers consistency from filter to filter resulting in a true-graded density cartridge which incurs no surface blinding, achieves high-flow rates and low-pressure drops, making the TruDepth from SPECTRUM the ideal all-round pre-filter.

True depth filter

Note the high dirt holding from outer to inner.

Rolled depth filter

Note surface blinding hence low dirt holding.
