Conflict Mineral Statement – Columbia Metals Ltd.

To whom it may concern,

Columbia Metals is a stockholder, not a manufacturer. Some of the alloys we stock contain tin, tantalum or tungsten. None of our material, to the best of our knowledge, was sourced from the DRC or any of the countries listed in the Dodd-Frank Wall Street Reform and Consumer Protection Act. As a UK registered company we are not required to file with the SEC and Dodd-Frank is not relevant to our operations, however as a responsible organisation committed to operating in an ethical and sustainable manner we are in the process of making reasonable country of origin enquiries of all our suppliers as to the source of their raw materials and making clear to them our policy of not accepting material of unknown provenance. To date, none of our suppliers has indicated that any of their raw materials have been sourced from locations linked to conflict minerals. Columbia Metals will only source responsibly and will not purchase material that has originated or is suspected to have originated in the DRC or surrounding territories. Statements of compliance from our suppliers will be held on file and subject to periodic review.

It should be noted, however, that the manufacture of large quantities of our stock predates the introduction of Dodd-Frank and any assurances given regarding current material origins cannot be assumed to apply to this older material.
