## ICS Chillers Certified by Eurovent

Temperature control specialists, ICS Cool Energy Limited are pleased to announce that their latest range of air and water cooled chillers have been certified by Eurovent.

*"Eurovent Certification certifies the performance ratings of air-conditioning and refrigeration products according to European and international standards."*

*The objective is to build up customer confidence by leveling the competitive playing field for all manufacturers and by increasing the integrity and accuracy of the industrial performance ratings."\**

This latest ICS Cool Energy chiller collection features units offering capacities ranging from 33-2416kW working with scroll, screw and the highly energy efficient turbocor compressor technology. A wide range of functions and noise options are available including heat recovery, free cooling, class A efficiency, super silent and extremely low noise; catering for a vast range of process and HVAC industries.

For ICS Cool Energy to be awarded this important certification they were required to provide a list of their unit models and performance data which was then evaluated by Eurovent certification with a number of units selected for testing by independent laboratories. The results complied with the

relevant standards; which then allowed ICS to be listed in the Eurovent Certification Online Directory.

Adam Spolnik, ICS Cool Energy Director commented on the certification:

*"Receiving the Eurovent certification provides our customers with confidence in the products they are purchasing and guarantees that they apply with the design specifications. Energy costs will be correctly stated and therefore the supplied product will correspond with the initial investment."*

The purpose of this certification is to provide the consultants, specifiers or end users with assurance that the products they are purchasing meet the highest level of industry standards. Eurovent creates common sets of criteria for the ratings of products, so engineers do not need to carry out detailed comparisons and performance qualification testing.
