

Solid surfaces

Grant Westfield work in a wide range of Solid Surface materials from Avonite to Velstone.

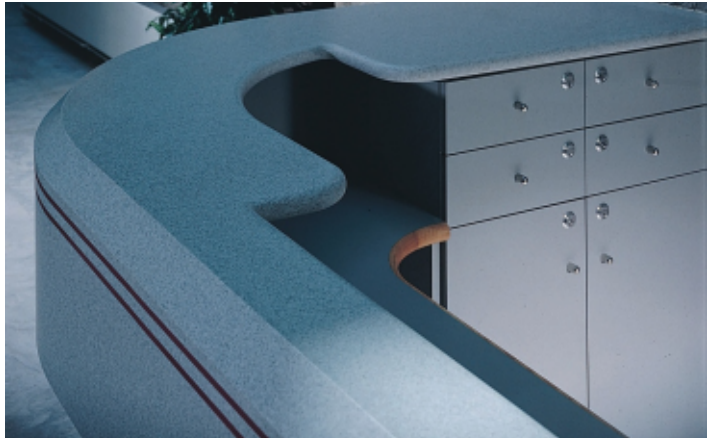

As fabricators of these materials since the 1970's we bring skill and experience to the creation of special components to meet your every need.

As part of our fabrication service we offer heat forming and specialist CNC machining.

These materials offer virtually seamless joints and allow the creation of 3-dimensional shapes.

Solid surface materials are remarkably resistant to staining and marks such as cigarette burns and can be easily restored to their original finish or repaired after serious damage.

Ranges of cast sinks and basins are available for seamless incorporation into surrounding surfaces.
