## Wave™ Cat No: 6349

The curtain heading system from Silent Gliss. Available in 50m rolls.

The curtain system Wave® Standard comprises of four basic elements:

**Glider Cords (60mm & 80mm), Curtain Heading Tape, Iron on Hemming Tape and Curtain Hooks**

### How Wave® Works

A specially designed glider cord is contained within the curtain track. This limits the extension of the curtain fabric, creating a smooth and continuous wave effect. When opened, the system enables the curtains to stack back neatly and straight.

The fullness and wave depth of the curtain depends on the selected glider cord and the applied spacing between the curtain hooks. The stack depth varies between 8cm and 14cm.

### Enhanced Wave®

There are parts available which can further enhance the look of Wave® when using the 80mm glider cord. The key part of this enhanced system is an extension arm which ensures the first and last waves of each curtain are the same size and shape as the others (rather than slightly smaller). Other parts include an adjustable brake (hand operated systems only) to prevent the curtain 'creeping' closed.

When buying the system complete with curtains, they come with additional fabric side weights to give a precise and controlled finish to the base of the curtain.

Wave® Standard is available with the following Silent Gliss curtain track systems:

#### Hand drawn curtain tracks:

**3840, 6130 and 6100**

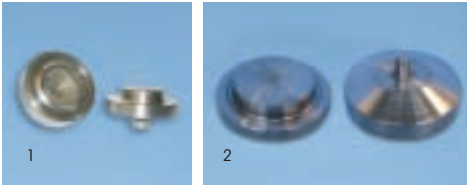

#### Cord operated curtain tracks:

**3840 and 6120**

#### Motorised curtain track systems:

**5300 and 5400**
