Helmsman

Helmsman manufacture, supply and install lockers, cubicles and seating. Our metal range ideal for dry environments (those areas not near showers or outdoors) are fully illustrated in this brochure.

As manufacturers with over 200 years experience we have the ability to build storage solutions to your exact requirements.

With a vast array of colours and options, we are certain you will find what you are looking for within the Helmsman range.

Camlock fitted as standard

Sloping tops are available to meet the requirements of hygiene-critical businesses

Standard Lockers

Our standard mild steel lockers offer secure storage for one to six users. They are available in a wide choice of widths, depths and colours to match storage and space requirements. Options of stands, stands with seating, sloping tops and ventilation are also offered.

All Lockers are 1775mm high.

1301 - 1 compartment locker

'Unifi'

Specialised Lockers

1307 - Welled Locker with seat option

W	D	Nesting
380	x 450	1 & 2

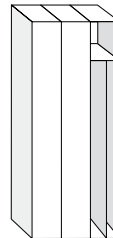

with seat option

Specifying a 'welled' front allows for the attachment of a seat. This is done without the need for a stand so is particularly useful where the room height is limited. The possibility of the build-up of dust on the locker floor is minimised by the incorporation of a dust removal slot at the bottom of the well plate.

1308 - Divided Locker

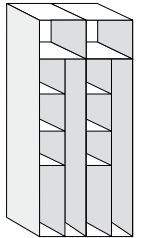

W	D	Nesting
300	x 300	1, 2 & 3
300	x 450	1, 2 & 3
380	x 380	1 & 2
380	x 450	1 & 2
450	x 450	1 & 2

The Divided Locker adds a vertical partition that gives the locker two separate hanging areas that can be used, for instance, to segregate soiled workwear from clean outdoor clothing.

1309 - Uniform Locker

W	D	Nesting
450	x 450	1 & 2

The Uniform Locker offers full-length hanging plus plenty of shelving for easy-access storage of ancillary equipment, helmets and the like.

All Lockers are 1775mm high as standard.

Twin & Big Twin

The Twin Locker provides storage for two users within a standard body footprint. Each user has access to an individual full-width upper compartment and a half-width tall compartment for hanging garments.

Each user's two compartments are operated by the same key.

This construction saves around 40% of the floorspace that would be required for two independent full-length lockers, a useful feature where space is at a premium.

The Big Twin uses its increased height to provide even more space for each user within the upper compartments. Invaluable for motorcycle helmets and other bulky items.

1401 - Twin Locker

W	D	Nesting
380	x 300	1 & 2
380	x 400	1 & 2

Locker height 1775mm

1402 - Big Twin Locker

W	D	Nesting
380	x 450	1 & 2

Locker height 1945mm

Golf

These 1275mm (4ft 2in) lockers, whilst originally designed for the storage of golf equipment, have found many other applications for which their reduced height makes them the most suitable choice.

The Foursome has four, equal-sized compartments for the storage of smaller items.

The golf-bag sized Classic is designed to be fitted with a seating unit.

The similarly sized Club can be stacked on top of the Classic as a space saving measure.

The Professional, which is fitted with a shelf unit is primarily designed for the storage of clothing.

All Lockers are 1275mm high as standard. The Classic, Club and Professional feature coat hooks on each side of the main compartment and a hanging rail beneath.

Modular

For total flexibility and design freedom the Modular range takes a lot of beating.

They can be combined to form seating or worktop areas, or can make use of dead space under windows, stairways and other awkward areas

The lockers are available in two sizes, both with optional internal shelves. Fixings are supplied for connecting Modulares into groups, or for fixing to the optional plinths.

Locker height 340mm

Archform Unit

The Archform provides non-secure, ventilated storage for clothing in locker rooms.

It is generally used in combination with full-height, 450mm deep, compartment units.

The Archform consists of a dust cover, H-frame and hanger rail stabilising bar. Captive coat hangers and shoe rails can also be supplied.

Archform Unit (Bespoke design)

Hanger shelf and rail fitted with 10 captive coat hangers and stabilising tie bar.

Options:

- Shoe rail
- Sloping top hanger shelf

Sloping tops are available to meet the requirements of hygiene-critical businesses

General Workwear Collectors and dispensers

If you need to make certain that clean workwear is held securely and yet is available for individuals around the clock, and that soiled workwear is both tidy and secure the managed garment system is the simple choice.

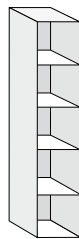

In the Garment Dispenser each user has a lockable personal compartment which is uniquely keyed.

The operative filling the dispenser uses a single key that gives them simultaneous access to all the compartments in a unit, so there is no need for them to open each individual compartment.

The Garment Collector features a single 'posting' slot behind which there is a baffle that makes pilferage difficult. The garments can collect within the unit, or an optional laundry sack can be hung inside to make collection even simpler.

The Collector door is keyed to match the service lock on the Dispenser.

All Lockers are 1820mm high.

Metal Solution

Mini Minder

The Mini Minder is the perfect solution if you need to store small personal valuables, such as mobile phone, keys, camera etc.

Available in either 12, 20, 28 or 40 compartments per unit the Mini Minder can accommodate a number of different size workplaces.

This locker is suitable for use in schools, colleges, call centres, hot desking solutions, and for use in dentist and doctor's surgeries.

The Mini Minder is available as a wet specification total laminate "Heavy Duty" Solution.

Heavy Duty Solution

Compartments Dimensions (approx.)

	H	W	D
12	970	600	200
20	1190	800	200
28	1626	800	200
40	1845	1000	200

Dimensions and components vary for Heavy Duty option - please call for details.

Emergency Services Solutions

These are examples within our product portfolio that illustrates our unique ability to provide bespoke products.

Lockers

The emergency services locker is large enough to hold personal safetygear, belts, hats, boots and seasonal clothing.

The storage area is efficiently divided combining adjustable shelving and separate hanging space.

Particular attention has been paid to the needs of the user in positioning a mirror inside the door.

In addition, an extra locker, for public order equipment, could stand on top or underneath the main locker if needed.

Shelving and Seating

In its "fire" red colour scheme, the new "all metal" integrated shelving and seating system looks proud and robust in the training centre changing area. Fire-Fighters can easily hang their Fire Kit on the captive hangers and their helmets and equipment on the storage shelves.

Product	Dimensions (approx.)		
	H	W	D
Double door locker with adjustable shelves.	1775	700	450
Kit bag locker	591	1000	550
Shelving unit (can be customised to suit requirements)	2200	1575	400

Although specifically designed for the emergency services these designs are very suitable for any company/individual that has personal safetygear to store.

The Heavy Duty Locker

When working environments call for tougher storage solutions the Heavy Duty Locker provides extra security, without compromising on smart appearance.

The solid grade laminate door of the Heavy Duty Locker is tough and resistant to casual vandalism.

The robust 10mm thick doors are plant on covering the complete locker frame, providing a clear-cut finish.

Secured by a heavy duty hinge they remain strong, even under persistent mistreatment.

We also provide the

The Extra Heavy Duty Locker

The Extra Heavy Duty locker advances on the original Heavy Duty Locker door by combining tough inset doors with double locking components.

The advanced locking design provides a return lip within the internal door frame for the hooked cam to lock behind. As well as this a locking slot in the door frame upright enables secure locking in two places.

Picture on Page 11 shows the Extra Heavy duty design

Laptop Lockers

The beauty of the highly secure and durable Laptop locker is that it contains optional charging equipment.

So while your organisation's laptops, mobile phones, cameras, power tools, portable satellite navigation or mobile communication equipment is tucked away safely, it can also be recharged. If it has an AC/DC adaptor, our locker can recharge it. (Non charging lockers are available.)

The neat and stylish heavy duty 2mm thick metal lockers are available with a choice of either five (half height), ten or fifteen individual compartments.

You can also decide whether access is made to each locker by high quality lock or the access system below.

Access Management

Helmsman is able to provide lockers with that added extra.

As a bespoke manufacturer, our products are built to order which means we have the flexibility and knowledge to build any storage solutions to your requirements.

Now we have the ability to give our customers, advanced features:

- charging element within each locker, so laptops and handheld devices can be recharged whilst being stored and
- the ability to maintain total control over access to these items via a central "access control" system.

We work alongside an established access management company to integrate their software into our lockers, giving our customers total control by determining who can access the locker and when. It can also track when an item is taken and by whom. Users need never carry keys as the system can be accessed via pin code access or smart card.

This centralised management system is currently being used by several schools for storage of students belongings and control of laptops.

Extra Heavy duty locker with access control system

Heavy duty locker with access control system

Door options

As well as our Heavy Duty and Extra Heavy Duty locker doors, we can also offer metal Toughened or Vision door.

Toughened Door

When it's necessary to upgrade the level of security against more determined attacks here is one possible solution in the range. The unobtrusive double-skinned 'Toughened' door provides a far stronger door with a near identical external appearance to the standard option.

Vision Door

Where it is helpful to be able to monitor the contents of a group of lockers without having to open each of them in turn, the 'Vision' door with its acrylic insert is the simple choice.

Toughened Door

Vision Door

Postal Locker

The postal Locker is available in 5, 8, 10, 15 and 20 compartments. The postal slot can be customised to suit the user. We can add a slot to most doors.

Compartments	Dimensions (approx.)		
	H	W	D
