## SELF-CLOSING HANDRAIL COUPLER

- Ladder Accidents are the cause of more injuries and fatalities than any other hazard in the scaffolding and building
- This includes the simple operation of moving from the ladder onto the safe scaffolding area.
- Falls of this nature can now be considerably reduced, if not totally eradicated, with this innovative and simple coupler.

Heavy Duty ●

Zinc Plated ●

1.4Kg ●

The Presco Self-Closing Handrail Coupler is easily fitted onto any scaffolding with a standard double coupler. Handrail tube is inserted into the handrail coupler and locked by a single bolt. The safety gate forms an integral part of the handrail providing vital security for operatives moving from ladder to scaffolding.

By simple body pressure, the handrail coupler yields, moving inwards and upwards.

Once the operative has moved through the gate, gravity will return it to its original position, integrated into the handrail.

Available through a network of approved distributors throughout the U.K.

Manufactured to ISO9002 / BS5750 / EN74 Quality Assurance.

The **PRESCO** guarantee of quality and reliability.
