Previous projects

Examples of Aluminium panels. Precise control of alloy used and a wide range of finishes, colour and print can be sourced giving customers finished product.

A wide range of CNC and conventional machined parts produced from billet materials.

Various turned parts manufactured from a variety of materials.

What we do

Engineering 2000 creates the perfect resource for anyone looking to develop a patent. We can advise and produce parts in various materials including:

- Pure Aluminium
- Pure Iron
- Tantalum
- Densmit and Beryllium Copper

Plus all grades of:

- Aluminium
- Stainless Steel
- Steel
- Brass
- Copper

We can also machine various plastics such as:

- Acetal
- Nylon
- PTFE
- Acrylic and Tufnol

Established since 1999, Engineering 2000 prides itself in delivering high quality prototypes and production components.

We offer flexibility and we believe all our customers should be treated as special and that they all should benefit from our vast expertise regardless of quantity or order value.

So if you have an idea and want to develop it further, contact us now.
