Customer reviews

"We used Clipex in an extremely challenging environment where machinery access was impossible. The posts went up fast and easily, providing a very effective fence"
- James Hill of Hill Fencing Ltd, Blanford

"They are faster and easier than ordinary posts and fencing takes half the normal time"
- Malden Farm

"We brought Clipex for longevity rather than gamble with the lifespan of timber. We erected 800m of X™ fence® wire with the Clipex system in just two days. We are not fencers but this system is so simple. With an installation cost comparable to timber, we will be using it again"
- Dorset farmer

"They are a fantastic invention. They're easy to install and much faster to clip your wire in than having to staple. The wire is also very secure"
- S. Milne

"We erected deer fence for the first time, they were fast and effective and gave a very neat and tidy finish"
- WW Landscapes, Kent

"A post system like no other; quite simply you will SAVE 50% on lifetime costs & up to 50% saving on labour."

Clipex fencing example 1000m

Product	15 year UC4 pine timber stakes and strainers, HT hinge jointed galvanised wire, staples and line wires.	Clipex Standards, All steel strainers, X™ fence® triple life wire netting, top line wires. (No staples required)

Clipex Strainer driver sleeve	CL2794

Step by Step - easy to erect

- End strainer kit assembly components
- Erect end strainer/corners by digging or driving in manually or mechanically
- Hook strut in at 90° then turn to mitred edge
- Lay the strut on the plate, hook tension wire through pin & drive in
- Tension stay wire. Strainer done!
- Tie-off wires by hand, crimp or T-Clips
- Lightly tension the fence to nearly upright
- Space Clipex inters evenly between vertical wires
- Push the wire in the slot, then down past the keeper

- Finally reduce the tension curves by 50% Job done!
- Extras: Two ways and corners repeat strainer process as above
- Extras: Use Beefys to strengthen the fence line where needed
