for a better
future

Pumping technology
is SIHI
pumping
technology

We have been dedicated to pumping technology since 1920. A long time to continuously develop, advance and perfect our passion for engineering and all things technological. Countless opportunities to align our expertise to meet your needs and expectations. The result: We are in our element when it comes to innovative pumping and system solutions for fluids and gases.

Pumping technology is a driver in many markets

What do the following industries all have in common: Basic and fine chemicals, pharmaceuticals, food and beverage, engineering and plant construction, vacuum coating along with other industrial applications, and the energy and environmental sector? Ideal pumping technologies supplied by SIHI, of course – technologies with proven success in a wide range of processes across all market segments.

Pumping technology

connects
the world

SIHI maintains a global presence. Our specialists speak and understand a common language on all continents and are active across all national frontiers with one single purpose in mind: The fulfilment of your needs. No matter where you are, you will always find our consultant engineers and competent on-site service close at hand – for everything from process analysis to post-installation maintenance and repairs.

Vacuum pumps

Fluid pumps

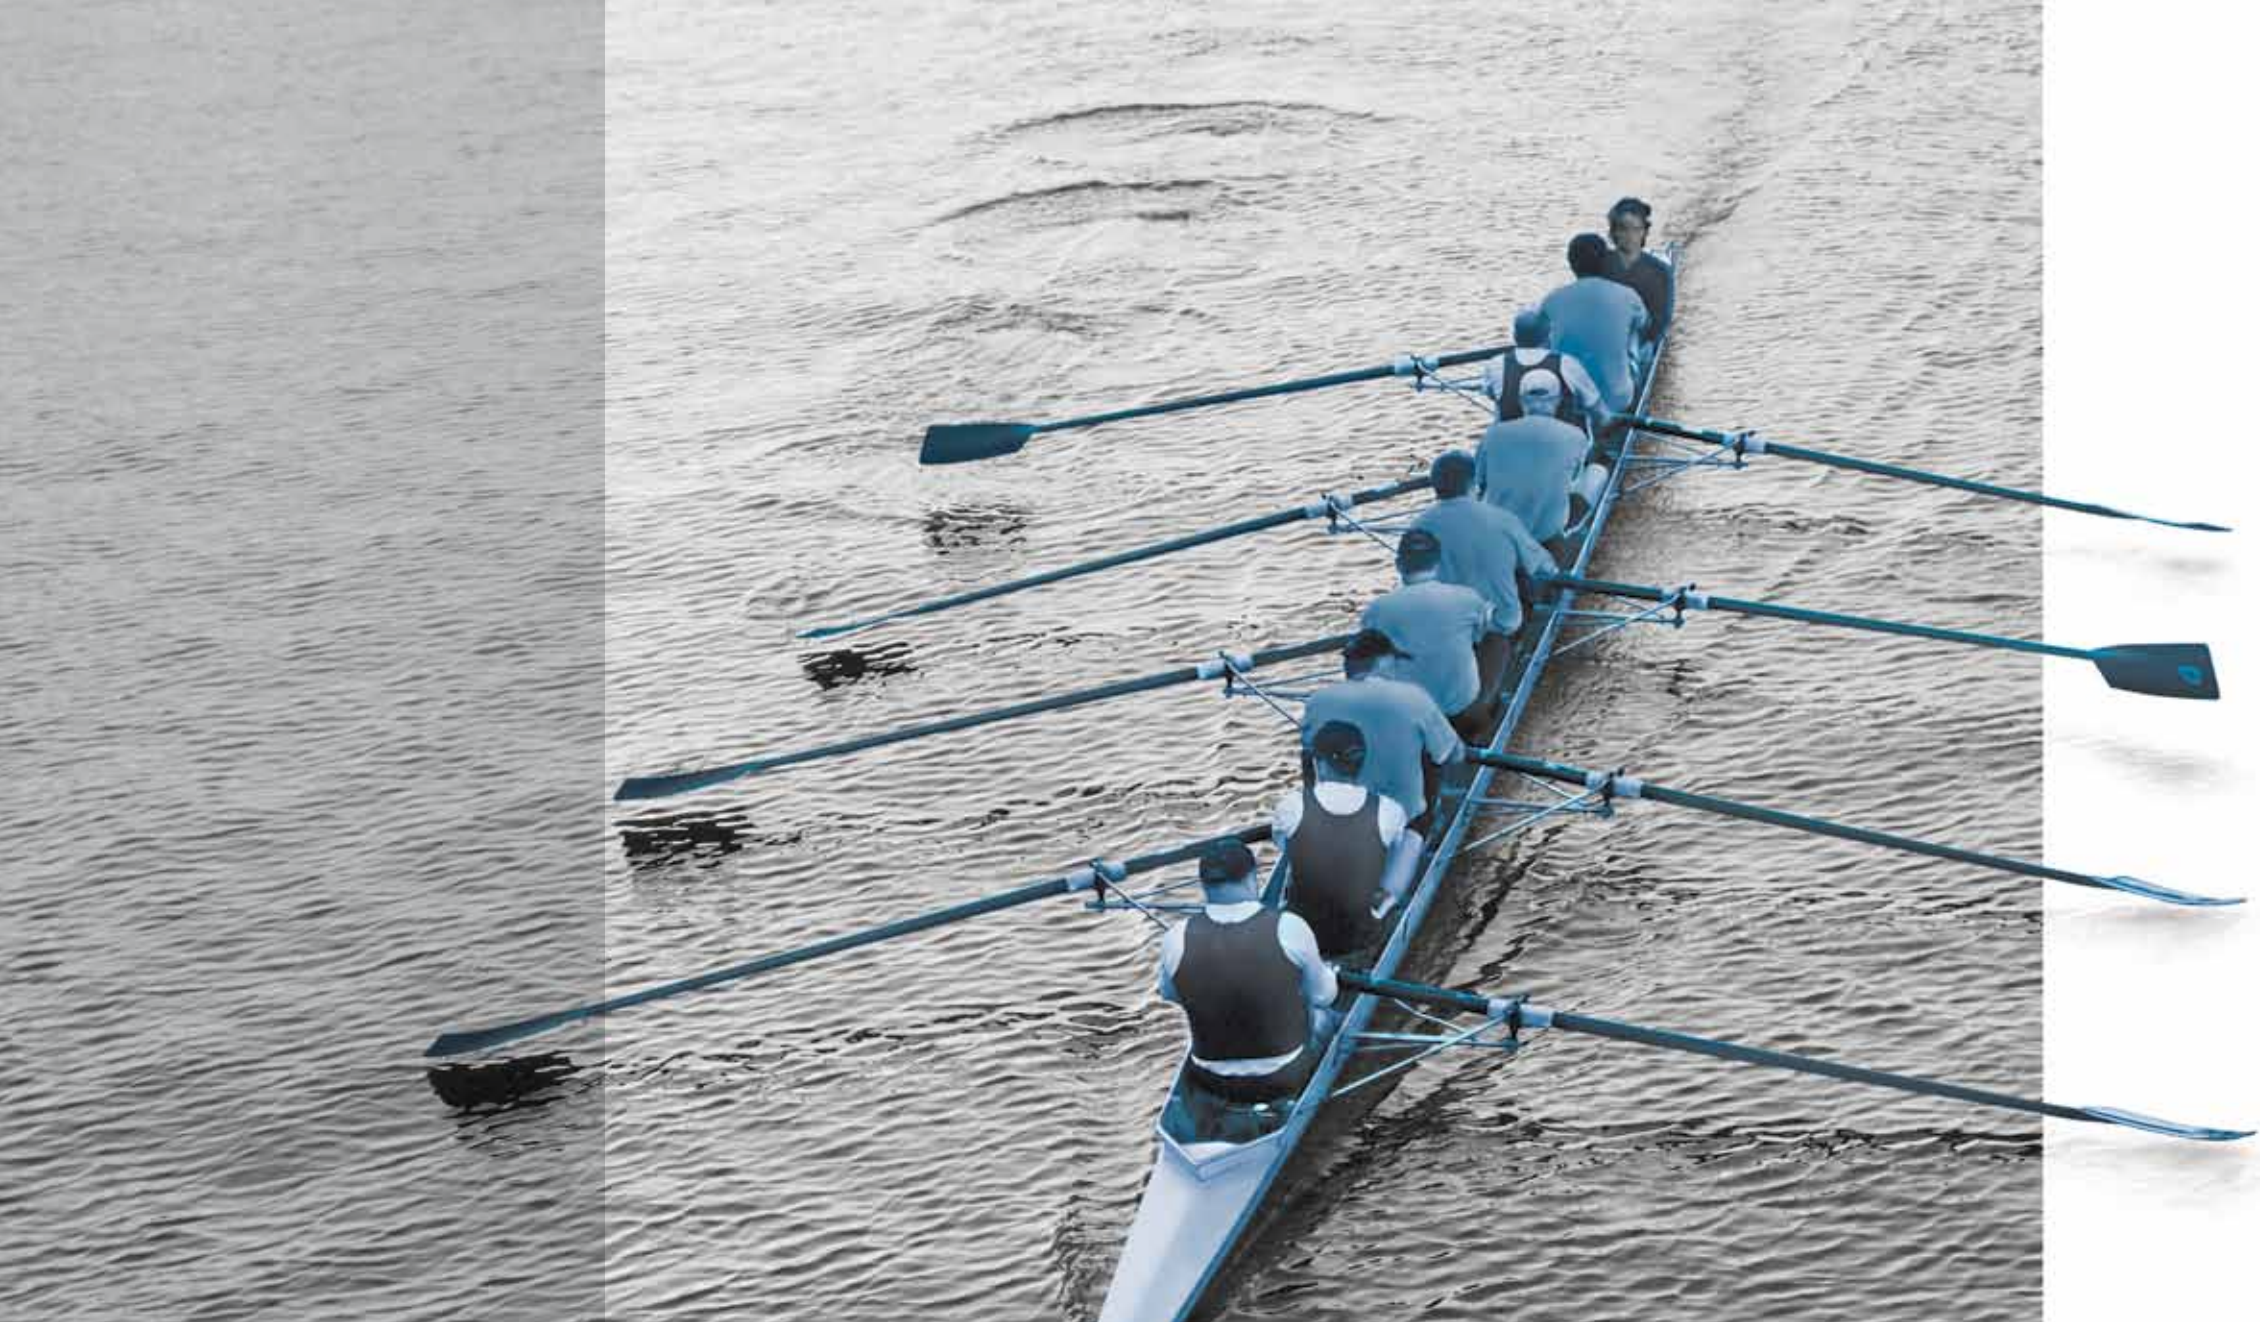

Pumping solutions from SIHI have always been pioneering innovations – today more than ever – and will also continue into the future. This is a commitment, which we pursue without compromise. Why? Because, our lead keeps you ahead of the field.

A better future
begins
every day
for a better
future

On the way to the future, it is often valuable to take a look at the past. Only those who learn from experience are in a position to implement the conclusions of the past in constant and continuous improvement process. It is for this reason why SIHI not only adapts to current situations, but also strives to actively shape the future – with every new day that begins.

A better future is built on teamwork

1,600 people – one common goal: to build a better future with pumping technology. This can only be achieved with mutual respect, absolute cohesion, openness and trust, responsible behaviour, and the promotion of skills and abilities by dedicated qualification measures – a corporate culture that characterises the entire company and is lived and breathed by every one of our employees.

A better future
is based
on **visions**

An investigative spirit. New perspectives. Forward thinking. Forging relationships. The commitment not only to move with the times, but always to be a decisive step ahead. Making the impossible possible. These are the reasons why imagination has absolute priority for SIHI. Imagination is the source of the creative ideas that lead to constructive solutions – ideas that achieve measurable benefits when transformed into realities.

A better future needs responsibility

Awareness of our responsibility to carefully manage valuable resources is growing – SIHI also grows in-line with this trend. On one hand, this is achieved by its own direct contributions through process optimisation and the development of highly efficient machines. On the other hand, technological support is fundamental for the future energy and environmental sectors – for the generation of energy from renewable sources... For a greater quality of life... For the generations to follow... And, naturally, for ecological and economic sustainability.

A better future lies ahead

More and more targets lie ahead – targets that you can set your sights on with our help. Constant exchange and continuous development let us understand and implement these targets. Together with SIHI, you can grasp the initiatives that lead us all to a better future – this is our wish.
