## INLET PIPE FITTING INSTRUCTIONS.

1. Cut 140mm hole in the desired position on the tank using the holesaw and arbour provided by us.
2. Firmly push the 110mm rubber flexy seal socket into the hole once it has been drilled.
3. The rubber seal is now ready to receive your 4" inlet pipe.
4. Push the 4" gravity pipework firmly into the receiving flexy seal socket.

NOTE: The above images show the installation of 4" gravity drainage pipe (inlet). We also supply holesaws and rubber inlet sockets for 6" drainage systems. Although the installation procedure remains the same for both sizes.
