

Booster sets

Applications

- Water supply
- Heating, ventilation and air-conditioning
- Water supply for washing and heating systems
- Irrigation
- General industry
- Fire-fighting systems

Features

- Built to water authority specification
- Turnkey designs to suit site requirements e.g. site space limitations
- WRAS approved
- Wide range of 2 to 10 booster pump systems controlled by pressure switches/transducers to achieve constant or variable speed duty requirements

Options

Break tanks, Kiosks, Base plates & Telemetry

Verder provides tailor-made automated pressure sets to boost water pressure.

The sets are capable of responding automatically to changing levels of demand. High efficiencies are generated by the low motor power used with IE2 fixed speed motors and variable speed options. Verder water booster package sets provide an excellent solution to those customers with wide variances in demand for water.

We are able to provide solutions to applications and site problems. Whether for hotels, offices, industrial units or sewage works, Verder is able to meet your water needs.

We build and test the booster sets in our own workshop. The Verder project team carry out full hydrostatic and performance tests prior to transit reducing the amount of work needed to be carried out on-site.
