

The environmentally friendly planting system

EcoCulture® offers a world of difference

Reflects current environmental awareness

Produces healthier and more vibrant plants

Reduces carbon footprint

Enhances workplaces cleanly and hygienically

Conserves the Earth's valuable peatlands

Supports ISO 14001 accreditation

EcoCulture®: an all-round better choice

The EcoCulture® planting system from Plant Plan is increasingly the preferred option for all types of commercial environment. Producing and maintaining the healthiest of plants to enhance your workplace, EcoCulture® also plays a valuable part in preserving the environment in which we live.

EcoCulture® is clean, hygienic and excellent for plants. But almost more importantly, it fulfils the responsibility of all of us to think carefully about the environmental impact of what we do and how we do it.

Environmentally sympathetic...

By replacing conventional peat-based growing medium with porous granules and a controlled reservoir system, EcoCulture® conserves the Earth's valuable peatlands – unique areas supporting diverse wildlife. These have long been associated with natural carbon absorption and storage and therefore help to preserve the ozone layer and reduce global warming.

Benefits to your environment...

EcoCulture® specialist granules eliminate soil-borne pests and diseases. It has also been proved that EcoCulture® produces exceptionally vibrant plants that improve working conditions and provide definite health and morale benefits to you and your staff.

Plant Plan is ISO14001 certified and is the exclusive UK distributor of EcoCulture®. To discuss the benefits or your plant requirements call 0800 279 3120, or email your enquiry to ecoculture@plantplan.co.uk
