Sheet Metal Fabrications

T.A.B. Sheet Fabrications Ltd was formed over 25 years ago as a sheet metal fabricating company, with the capabilities to fabricate general components to serve the local industry.

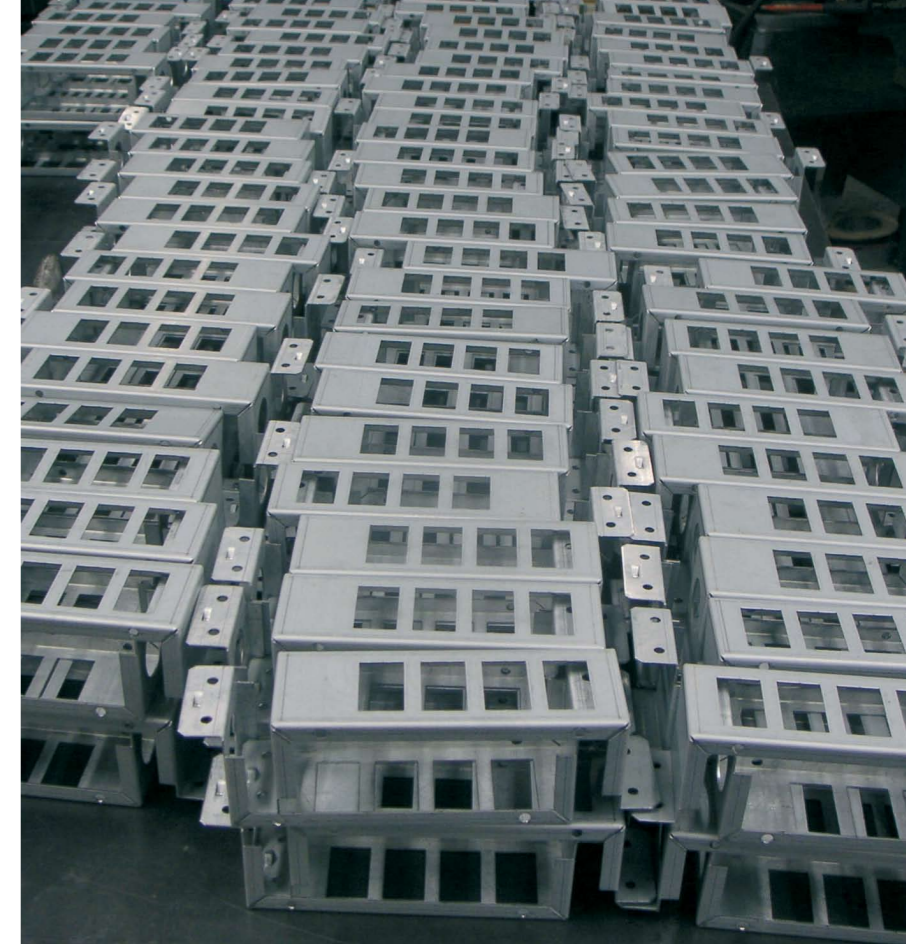

As we have grown we have expanded our machine capacity and customer base. Within our factory, we now offer a nationwide service of forming sheet metal and sectional steels. Along side the more traditional forming equipment our large factory now has CNC press brakes, guillotines, punch press and tube bending machines. There are also hydraulic DNC controlled section rollers, saws and formers.

Within our welding sections we are able to work with stainless steel aluminium, titanium, as well as the more conventional materials. There is also extensive tooling to allowing us to finish a product to the very highest standards required by our customers. T.A.B can produce prototype, repeat batch (large or small) or even single one off's. With our continual monitoring of accuracy and finish we ensure the customer's specifications are always met.

We are able to manufacture directly from customer-supplied drawings, or even provide a full design and manufacture service. This may be from a basic idea scribbled on a notepad to full CAD illustrations, depending on the client's needs and budget.

When TAB is commissioned for design works, we maintain regular contact and updates, to ensure that the finished product is exactly to the customer's requirements.

Call us now on 01621 858 848 to discuss your requirements.
