Controls Division

Ducting Systems Division

Structural & External Division

Sheet Metal Division

Swimming Pool Industry

For over 25 years, TAB Sheet Fabrications has been designing and installing ducting and equipment for the Pool Industry.

This is an industry requiring a high standard of integrity in both underground and overhead ducting with accurate jointing and vapour sealing being paramount.

With our underground ducting we pre-insulate and vapour wrap prior to it leaving our factory.

On site, all underground joints have neoprene gaskets or high velocity sealant applied with great consideration to maintain the vapour seal on the system

With our overhead ducting, joints are flanged and sealed via rubber internal gaskets or high velocity sealant.

Our in-house facilities allow us to manufacture and install to client's specifications, or with our design team produce drawings for approval and fabricating.

Ducting can be treated internally with a variety of products to help reduce corrosion and can also be polyester powder coated externally to help blend with its surroundings.

Utilising regular suppliers and subcontractors, we are able to expand our services and offer a complete package of dehumidification equipment, pumps, controls and ancillaries.

TAB's long standing relationship with companies who specialise in the construction and fabrication industry, enable us to confidently supply integrated equipment with the knowledge of full compatibility and high standards of quality.

Call us now on 01621 858 848 to discuss your requirements.
