## Sanitary Waste Pumps

### Uniflo-Flush/ Extra Macerator

The Uniflo-Flush/Extra  
Easy service access without having  
to remove the WC.

complete with the standard front  
entry WC inlet with adjustable  
connector, a top left inlet and a  
further additional side inlet  
complete with built in non return  
valve to accommodate other  
bathroom fixtures i.e.: high  
stepped raised shower tray, basin,  
raised bath or bidet. Any of the  
inlets can be blanked off if not  
needed making this unit ideal for a  
number of installation. This unit  
comes complete with inline  
non-return discharge outlet valve.

The waste pumped outlet operates  
best when installed in 32mm but  
can be increased to 40mm pipe  
work if totally necessary.

The macerator is fully automatic, it  
has a very powerful 600w motor.

The compact design will blend in  
with any bathroom installation, it  
also includes easy access for  
servicing, making this product a  
good choice in waste removal.

**IDEAL FOR CELLAR / LOFT  
AND BASEMENT  
CONVERSIONS.**

#### Technical Data:

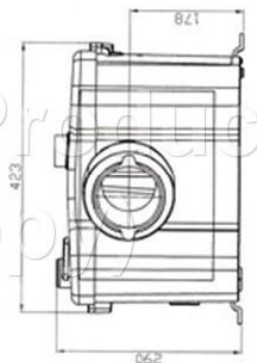

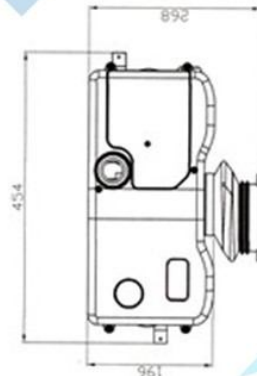

Input Voltage AC 220-240v, 50hz

Input Power 600w

Protection IPX4

Max Input Flow: 16,00L / min

Output flow 240L / min

The Macerator unit is designed to  
grind up and pump away sanitary  
waste from toilets and bathroom  
fixtures.

The unit works on air pressure, when  
the toilet is flushed or a basin is used.  
The waste water enters the unit  
causing air pressure to build up inside  
the air pressure switch, this then  
activates the motor and pump which  
drives the cutting blades to grind up  
the waste and pump the liquid through  
the outlet via small bore pipe work to  
the sewer or soil stack, making it  
possible to install a bathroom virtually  
anywhere in the home.
