## Sanitary Waste Pumps

Information Sheet  
Uniflo-HideAway macerator

Uniflo-Flush  
HideAway

The Uniflo-HideAway is designed to be hidden away in a bathroom cupboard or concealed behind a partition wall. It comes complete with side entry standard WC inlet, and a further two additional low level side inlets to accommodate other bathroom fixtures ie: shower, basin, bidet (please note: the Uniflo-HideAway is not suitable for a bath and some old type washing machines) any of the inlets can be blanked off if not needed making this unit ideal for any type of installation. This unit has built in non-return valves as standard. The waste pumped outlet can be installed in 32, 28 or 22mm pipe work, a 90deg long radius elbow is supplied to accommodate all three sizes.

The macerator is fully automatic, it has a powerful 400w motor. The compact and modern design will blend in with any bathroom installation, it also includes easy access for servicing, making this product your first choice in waste removal.

**IDEAL FOR CELLAR / LOFT AND BASEMENT CONVERSIONS.**

Please Note: This Product is not suitable for Baths.

### Technical Data:

Input Voltage AC 220-240v, 50hz

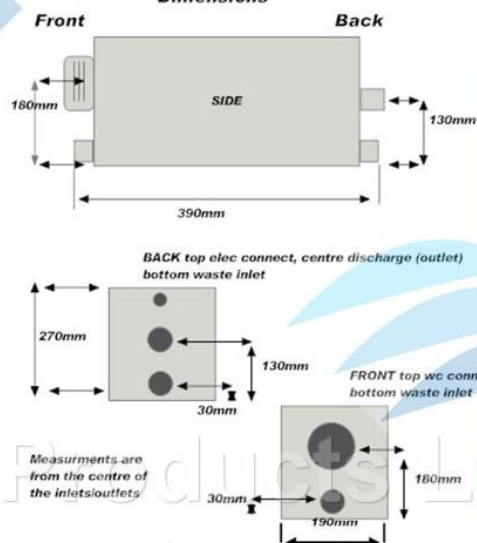

Input Power 400w

Protection IPX4

Max Input Flow: 14.5L / min

Output flow 240L / min

### Uniflo-Flush HideAway Dimensions

The Macerator unit is designed to grind up and pump away sanitary waste from toilets and bathroom fixtures.

The unit works on pressure, when the toilet is flushed or a basin / shower is used the waste water enters the unit causing the pressure to build up inside the pressure chamber, this then activates the motor and pump which drives the cutting blades to grind up the waste and pump the liquid through the outlet via small bore pipe work to the sewer or soil stack, making it possible to install a bathroom virtually anywhere in the home.
