

Wide Beam Boats

At Stoke on Trent Boat Building we offer a bespoke and standard wide beam construction service. All work is carried out in house from laying the steel base plate to the final paintwork. Our dedicated workforce ensures that every boat we produce is of the highest quality. And our policy of continuous improvement enables us to keep abreast of all the latest technical developments incorporating only the best equipment into our finished product.

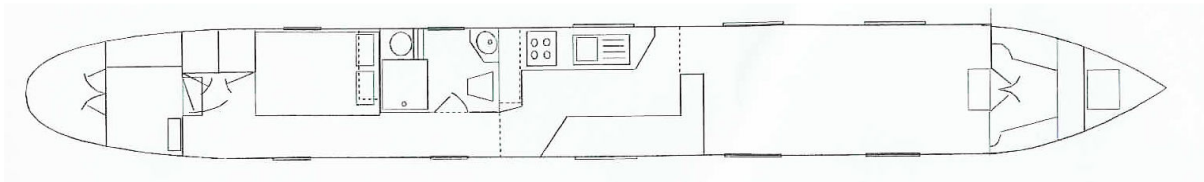

"...a well chosen crew of very competent craftsmen whose work is top notch. I'll remember all of them when I run the boat. "

M A. Los Angeles

Wide beams allow great scope for varying layouts, lengths and beams, so a standard boat is unlikely to suit everybody. However, we provide 55ft by 10ft standard boat as detailed below.

Specifications

We believe that the below specification will provide a versatile and luxurious boat that will be a pleasure to be aboard. We realise it may not suit your particular requirements and will be pleased to discuss these with you. Variations to length and beam as well as general specification can be catered for.

External

We construct our own steel shells which have been designed to give good looks matched by ease of handling - a hull shape that swims really well. In addition to these essentials our hulls are built to last with appropriate choice of steel thickness and paint specification.

- Plating thickness: 10/6/5/4mm certificated plate
- Fuel tank: Integral 300 ltrs
- Weed hatch: Quick release, stern deck access hatch
- Gas locker: Integral for 2no 13kg bottles
- Bow deck: Steel self draining
- Stern safety rail: With timber taff rail
- Bow deck lockers: Port and starboard

- Plank/pole brackets: Steel on roof
- Anodes: 4no 2.5kg
- Windows/Ports: Windows and ports to customers choice
- Navigation: Bow and stern fenders and ropes. Plank and pole
