

Our *passion* is enclosures.

Industrial electronic enclosures from stainless steel.

ROLEC inoCASE.
Quality without compromise.

ROLEC®. Simply better.

ROLEC inoCASE + inoCASEmini - the new benchmark for industrial electronic enclosures from stainless steel.

ROLEC is proud to be leading the development and application of new enclosure concepts. The founders of the company, Friedhelm and Matthias Rose, are pioneers of enclosure technology. They possess decades of experience in the industry.

They have repeatedly succeeded in setting new benchmarks in the further development of familiar enclosure systems for the optimum packaging of modern industrial electronics.

Extensive customer benefits and an advantageous design have always been the most important objectives.

Enclosures from rustproof stainless steel were previously not part of the ROLEC delivery program. However, experiments with this sophisticated material have been taking place for many years.

We did not find a product that met with our expectations for enclosures from stainless steel for the installation of modern industrial electronics. Enclosures from stainless steel are still fastened with holes in the enclosure base. Users are exposed to risk of leaks and damage to components.

The single-channel fastening system - proven millions of times over - employed with the aluNORM enclosure range from aluminium has been adapted for the A2 enclosure: Four welded screw channels in the enclosure corners. The A4 version has separate fastening channels.

Our *passion* is enclosures.**inoCASE A2**

enclosures obtain an aesthetically pleasing, high gloss surface that is even more resistant to corrosion due to alternative „electropolishing“.

Enclosures from stainless steel - when corrosion-resistance matters!

ROLEC has carried out detailed corrosion and leak-tightness tests and had these verified by independent test centres.

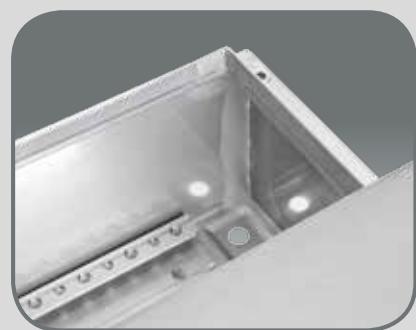

4301/A2 is the world's most commonly used rustproof stainless steel material. Internationally, this quality predominantly bears the designation „304“, the material used in the standard version of the new ROLEC inoCASE enclosure.

**ROLEC inoCASE A2**

Space-saving single-channel lid and assembly fastening, outside the enclosure interior.

**ROLEC inoCASEmini A2**

Space-saving single-channel lid and assembly fastening, outside the enclosure interior.

**Conventional manufacturers**

Fastening of the enclosure with through-holes in the base (inside the enclosure) or external lugs.

inoCASE A4

The inoCASE enclosure in material quality A4 exists for the maximum demands applicable in the pharmaceutical / process control engineering / foodstuffs sectors and other areas.

ROLEC inoCASE A4
Assembly with separate
fastening channels.

ROLEC inoCASEmini A4
Assembly with separate
fastening channels.

ROLEC inoCASEmini
Stainless steel enclosure, standard and electropolished.

ROLEC inoCASE + inoCASEmini – in chlorine-resistant A4 stainless steel. For every environment.

4404 / A4 internationally customarily designated „316L“, is even more resilient. This alloy contains molybdenum for the further enhancement of corrosion resistance, in particular to chloride and seawater. Applications in areas close to the coast frequently demand the use of higher types of alloys. The marine atmosphere contains components including chloride, which precipitate

on stainless steel parts due to moisture in the air. When the moisture evaporates, salt is left behind and this becomes concentrated due to constant deposition. Interesting is that parts protected against rain are at particular risk of corrosion in marine areas because the unavoidable deposits are neither diluted nor washed away by rain.

Smooth surfaces prevent corrosion

In addition to the right alloy, the surface characteristics also have a decisive influence on the corrosion resistance. Optimum protection in coastal areas is afforded by clean, bright metallic surfaces that are fully passivated.

ROLEC offers electropolishing as an option with the new inoCASE enclosure. With this process the roughened surface is electrochemically removed.

This results in a highly polished top surface, closed in the micro range and with a new, seamless passive layer. This not only prevents corrosion but also decisively improves the appearance of the enclosure.

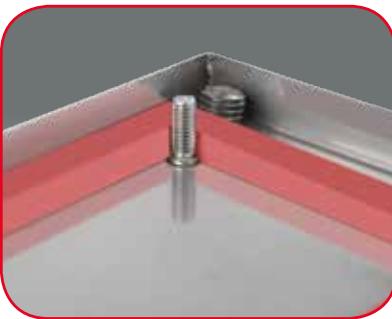

ROLEC inoCASE. 4301 / A2 stainless steel.

Details at a glance

Space-saving single-channel lid and assembly fastening, outside the enclosure interior.

Silicone profile gasket glued into the lid.

Fastening lugs in the enclosure bottom for components.

Processing of standard sizes

All types of processing can be carried out economically with standard sizes on our own „3D“ CNC laser processing centre.

Special sizes

Individual special sizes can be supplied on customer request from 50 units.

Cable glands

Metric cable glands and pressure equalisation elements are available from stock.

Technical data A2

Enclosure

Stainless sheet steel, edged and welded

Alloy 1.4301 (AISI 304) V2A, sheet thickness 1.25mm

Lid screws

Stainless steel (V4A), captive, allen screw

Temperature range

- 40°C to + 80°C

Fastening

Space-saving single-channel technology

Ingress protection

IP 66 EN 60529

Components

Fastening thread M5 in the enclosure bottom

Earthing bolt M5 in the lid

Gasket

Silicone flat gasket

Surface

ROLEC General technical information:

Chemical resistance of rustproof stainless steels A2 and A4.

The resistance characteristics may change in practice; the effect of pure agents is rare, admixtures often strengthen or weaken the surface attack. Likewise, residues on the enclosure can also affect the conditions. The most assured way is to carry out testing under application conditions.

We are therefore unable to provide any guarantee in relation to this information.

Chemical resistance of enclosure materials.
