

Environmental  
Integrated  
Solutions

For your air pollution  
control problems

- VOC Abatement
- Odour Control
- Thermal Oxidisers
- Catalytic Oxidisers
- Rotary Concentrators
- Adsorption Systems
- Wet Scrubbers
- Dry Scrubbers
- Biological Systems

Our reputation and our international references make  
EIS the premier choice in the field of air pollution control

## EIS is the leading UK manufacturer of turnkey Air Pollution Control Equipment and we specialise in VOC Abatement and Odour Control Systems.

Our design emphasis is to minimise the "lifetime" cost of any installation by careful control of both capital and running costs. Primary and secondary heat recovery, with heat recycle to process, will be used wherever practicable and many of our thermal oxidisers operate in autothermal, flameless, mode without the use of primary fuel.

We work in all industrial sectors from printing and packaging to chemical and pharmaceutical and we have particular process experience in difficult areas like sewage sludge and recycling.

Whatever the technology or sector, we pride ourselves in our engineering and project management skills. We will appoint a Project Manager at order placement and he will follow your project through to satisfactory completion and handover, supported by our team of qualified design, installation, commissioning and service engineers.

### We also offer a full range of other services including:

- Process surveys to establish air volumes and solvent concentrations
- Olfactometric testing and odour mapping
- Dispersion modelling
- Optimisation of process exhaust flows
- Enclosure and capture systems to minimise system throughput
- Ductwork design and installation
- Heat recovery systems
- HAZOP studies
- Comprehensive warranty packages
- Spare parts
- Full range of engineering services
- Service and maintenance
