Stanley | Electronic Cabinet Lock

The cabinet lock that can be opened with proximity tokens or cards

Overview

Remarkably cost effective and easy to install the Electronic Cabinet Lock from Stanley offers increased security for locking cabinets, desks and furniture.
The lock is a standalone unit with a spring mechanism that is driven by an electric motor (3V) and an EM 4102, 125 KHz reader.
A replaceable lithium cell 3V battery supplies sufficient electrical power to assure 20,000 openings. The lock then signals that the cell should be replaced.

Up to 50 KeyPAC® 125KHz tokens or cards can be programmed onto each lock and may be deleted at any time.
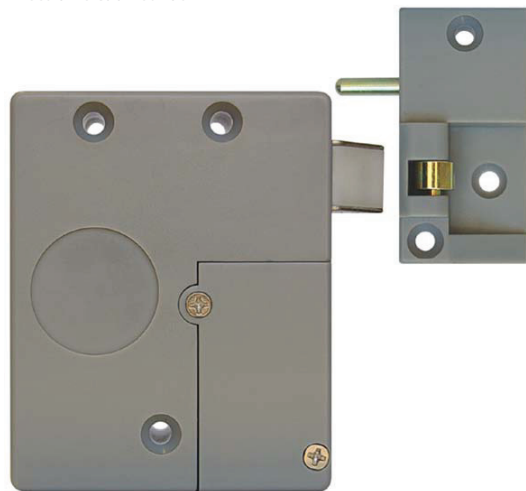

The lock is easy to program and coded proximity access tokens/cards offer maximum protection against unauthorised opening of the lock.
A striking plate equipped with a spring that automatically releases the doors after electronic unlocking.

Key Features

Electronic Cabinet Lock

Up to 50 ID devices can be programmed onto each lock
ID Technology – KeyPAC® EM 4102 – 125 KHz
Electric motor using a 3V Lithium Battery
