

Used and useful

New laboratories are being established all the time. Akribis Scientific Ltd helps to stock them by specialising in new and used laboratory equipment at reasonable prices

Setting up a new laboratory can be a difficult and costly affair. Sourcing specific equipment, from spectrometers, lab ovens and incubators to glassware and consumables, can be a major undertaking. With limited research budgets, it is important to strike the correct balance between sourcing the suitable equipment and getting the right price. Pre-used instruments can be provided at a fraction of the new price.

Akribis Scientific Ltd, established in 2003, has a core key and expanding presence in the new and used laboratory and scientific equipment market. With strong links with a broad spectrum of individuals, companies and academic institutions, we have experience of supplying to research laboratories stretching across the globe.

Akribis Scientific provides the opportunity to raise cash from your redundant lab equipment and scientific instruments from previous projects and research.

We offer dedicated resources and continually strive to improve on our efforts, helping to ensure a superior quality of service. Our services focus on providing a range of quality new, used, refurbished and reconditioned equipment. Items we are able to source include autoclaves, balances, biological safety (class II) and laminar flow cabinets, centrifuges, CO₂ and dry bath incubators, fume hoods, heating mantles, incubators and ovens, microscopes, PH meters, spectrophotometers, ultrasonic baths, vacuum pumps and water baths. We also have considerable experience in finding those specialised, expert pieces.

Recycling

Akribis Scientific also has extensive experience involving laboratory clearance prior to the start of a new research project and can happily assist with the international relocation of a scientific project.

We provide a comprehensive clearance service for laboratories of all sizes, from large laboratory complexes to an individual piece of equipment. Even if it is a single piece of equipment, we are happy to purchase and are freely available to arrange immediate collection. As part of our supply of equipment, we aim to refurbish

Microscope

and reuse all of the equipment that we clear. This enables us to provide quality equipment at a reduced price, enabling you to use your project budget in a more flexible way.

Yet in a small number of cases, equipment is not always suitable for reuse. In these circumstances, we completely strip down all equipment, separating it into different components and materials, namely metals, glass and plastics. These items are then subsequently recycled, helping to protect the environment and improving our corporate responsibility.

Relocation

Relocating a laboratory is a stressful and costly undertaking. Ensuring the safe transportation of valuable equipment, materials and research documents is of particular importance. Akribis Scientific has the knowledge, familiarity and understanding to help you move safely anywhere in Europe, with experience of transporting difficult and hard-to-handle equipment. On arriving at your destination, we can further implement our proficiency and skill in assisting with the set-up of your new lab.

Combining our expertise in sourcing equipment at a competitive price, undertaking laboratory clearance operations and assisting in relocation, Akribis Scientific Ltd is your choice in science and laboratory facilities.
