

SELF-BUILD

sound isolation cabins

Affordable, flexible and incredibly easy to build
without compromising on acoustics

The ACOUSTICABINS EXPRESS sound-isolation cabin is designed to be incredibly fast and easy to install, without compromising the booth's excellent sound-isolating properties.

It's this easy to build your /

Your cabin will arrive on a pallet or crate.

You will need the following tools:

Two allen keys (supplied free with the cabin), a screwdriver, a spirit level, and a stepladder

Enviably acoustic performance is achieved from the high performance materials in the patented panels which simply slot together.

The interlocking panel design means easy assembly and effectively blocks sound escape in and out.

The AcoustiCabins **EXPRESS** can be built in a couple of hours – and can be just as easily dismantled and relocated.

Perfect for home studios, school music practice rooms, recording studios, voiceover rooms and vocal booths. Also ideal for confidential meeting rooms, language laboratories, examination rooms and medical testing.

Our AcoustiCabins **EXPRESS** cabin offers the following benefits:

- The cabin can be built in a couple of hours
- ...and relocated just as fast!
- No skill required
- No professional help necessary
- Only everyday tools required: screwdriver, spirit level and stepladder
- All panels are acoustically sealed – minimising noise escape
- CE compliant
- Balanced interior acoustics ensure high sound quality
- Door window for light and security
- Fan-assisted ventilation for pleasant environment

- Modular panel design makes virtually any size cabin possible
- Typical sound insulation performance: RW38dB
- Every cabin is checked and assembled before leaving our plant
- Full manufacturer's support and warranty

Optional extras:

- Additional windows
- CCTV
- Noise limiting devices
- Control room and live room set-ups
- Fire alarm capable
- Air conditioning interface possible
- Installation service available
- Finance available to qualifying customers

r ACOUSTICABINS **EXPRESS** !

See this in clear detail at www.acousticcabins.com/videos

1
First, install the door handle

2
Next, level the floor by adjusting the feet. Like the wall panels, the floor panel is made of acoustic materials to prevent sound from escaping downwards

3
Once you've put the floor down, you can start building the walls. The interlocking panels simply slot together – no tools required

4
Vertical and horizontal battens secure the panels in place

5
The sound-isolating door is the heaviest part of the room, so get an extra pair of hands to help you ease it into place

6
The ceiling is in two parts. First insert the larger outer frame, then insert the smaller, inner panel

The structure of your ACOUSTICABINS **EXPRESS** is now complete!

7
You can now start to put the absorbers up on the wall on the inside of the room. The absorbers come with an adhesive reverse side – simply peel the wrapper off the back

8
Screw the ventilator inside the booth using the pre-drilled pilot holes

9
Lastly, install the cable port. This has been cleverly designed to enable you to feed your cables through, while blocking noise escape

10
Success! Now you are ready to start using your AcoustiCabins **EXPRESS**

About ACOUSTICABINS EXPRESS

self-build sound-isolation cabins

AcoustiCabins **EXPRESS** sound-isolation cabins are incredibly fast and easy to build, and can be dismantled and relocated just as easily – giving you the flexibility you need, without compromising on sound-isolation. The cabins are designed for self-build, but we also offer an optional design and installation service upon request.

Ideal for the following applications

Music practice and recording: Home studios, music practice rooms, recording studios, vocal booths and voiceover rooms

Education: School practice rooms, language laboratories, examination rooms

Science and medicine: Audiology rooms, psychology labs, medical testing, interview rooms

Offices: Confidential meeting rooms, telephone cabins, psychometric testing rooms

Industry: Sound-isolation booths in manufacturing areas, acoustic component testing

About ACOUSTICABINS

AcoustiCabins has built on over 30 years of experience selling products and solutions for music artists and educators through Black Cat Music & Acoustics.

Based in the United Kingdom, Black Cat Music & Acoustics is an established and trusted professional noise control company with an experienced and friendly team offering a complete range of acoustic products. We can design, supply and install high performance acoustic equipment to solve your acoustic problems. Solutions we have provided include absorptive wall and ceiling panels; impact-resistant absorbers for high-impact rooms such as sports halls; acoustic curtains; secondary wall structures; acoustic shells; music practice rooms; home recording studios and sound-isolation booths.

Demand by customers led us to develop the AcoustiCabins **EXPRESS**, whose patented interlocking design makes it ideal for self-build, without compromising on the acoustic performance of the booth.

Call the AcoustiCabins team on 0844 846 9740 and we will discuss your requirements and come up with the best solution for you, whether you work in a school or college, in a recording studio, in a commercial or industrial environment, or are looking for an elegant-looking sound-isolating practice room for your home.

Optional Installation Service

The AcoustiCabins **EXPRESS** is designed to be fast and easy for the customer to install. Alternatively, AcoustiCabins can offer an optional installation service which includes:

- Help right from the start in choosing the right cabin for your requirements
- Design of cabins to suit existing spaces and conversions
- Design of cabins for new build to architect's plans
- Supply and installation of cabins and accessories
- AcoustiCabins on-site installation team to meet your deadlines
- Project management for the duration of the project
- All installers are **CRB checked** and the company is **Contractor Safe** registered
