

Turning your waste into energy -

WT10 Heater Unit

The WT10 is the middle unit of the double pass heat exchange models and will produce 300,000btu/hr of warm air, enough to heat a workshop of up to 7500ft².

Once again the WT10 is fully compliant with the clean air act without an oil or gas afterburner. As with all the WT range these units are the most robust, heavy duty heaters available in the market place.

The WT10 will dispose of approximately 800-1250kg of MDF, chipboard, hardwood or softwood waste off-cut per week.
