

A sustainable, cost effective option for gully, sweeping and interceptor waste treatment

Do you operate a fleet of tankers or road sweepers?

Wish there was a more cost effective and environmentally sound way to dispose of the waste materials?

Biogénie's facilities are already well known for their environmentally sound and cost efficient soil treatment capabilities at our sites across the UK. What isn't as well known is the fact that we can take in wastes from street sweepings and also gully and interceptor cleaning material.

We treat the material using our patented bioremediation process, ensuring that the end product is of suitable quality to be taken for beneficial reuse rather than landfilled like many hazardous materials. This means that this is 100% sustainable and crucially you will not pay the top rate of landfill tax for this material. Ideally we need the materials to be de-littered and dewatered but please call a member of our team to discuss your needs as we can accommodate these materials in various forms and on both 19 and 20 EWC codes from the list of wastes as well as interceptor wastes on code 130508.

Call us now to see how we can help you provide a more sustainable, cost effective disposal service for you and for your customers.
