

frem is traditionally renowned for its quality craftsmanship in the manufacture of purpose made reception desks and boardroom Furniture and complete storage solutions.

These skills combined with state of the art design techniques provide the total solution **fremwall** storage system.

fremwall is individually designed and manufactured to maximise all available space by fitting from floor to ceiling and wall to wall.

By using the wide range of standard modules including 3 depth and 6 width options **fremwall** can be utilised anywhere to enhance storage capacity.

fremwall offers a combination of modular space planning footprints and purpose made units to satisfy each individual need.

fremwall's structural design allows for use as standard cupboards or as room dividers complete with pass through doors. This eliminates the cost and loss of space associated with standard walls and partitions.

Units can be designed to fit around elements within the building structure to provide the maximum storage whilst maintaining a fluid feel to the working environment.

fremwall has been designed to meet the varying demands of new working practices. The system is capable of meeting these demands by flexible design, versatile materials and durable fittings and components.

Examples of flexibility include the options of up and over or side opening tambour doors to increase the floor space for more workstations.

The introduction of hot desking allows **fremwall** to be specified when providing personnel with docking stations or lockers enabling the rationalisation of the number of workstations.

In instances of high ceilings or air conditioning vents, **fremwall** can be capped at any height required.

The simple robust construction and modern manufacturing techniques allow **fremwall** to be installed quickly whilst offering unrivalled strength, stability and durability.

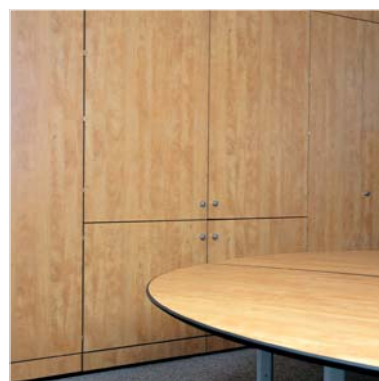

fremwall allows designers the freedom to create units which reflect the style of the company or environment. The mix of modern manufacturing techniques and new materials enhance the design opportunities such as wave and curved walls.

fremwall can be transformed into an audio visual wall allowing complete integration with the latest technology. To round off the perfect impression, the units can be manufactured in a range of finishes including real wood veneer, laminate, glass and MFC.

fremwall has been designed to the highest standards.

Features such as soft seal edging front and back, offers a large reduction in noise whilst reducing dust penetrating the unit.

The system is mounted on adjustable levellers which rest on the head and base track. This reduces point loads, increases stability and stops noise passing under or over the unit.

The cupboards can be dismantled and relocated any number of times as all structural fixings are located into threaded inserts.

The doors are all hung on 180 degree opening hinges allowing doors to be folded completely back, eliminating the risk of collision, damage in busy areas or corridors. The doors are also fitted with a three point espagnolette locking mechanism with locks having numbered cores which can be removed and changed.

fremwall offers the widest choice of finishes from any manufacturer.

Bold colours, modern and traditional wood grains in both melamine and laminate surfaces, natural real wood veneers with the ability to stain and tint to meet the customers exact requirements.

We can also provide full colour large format printing to create amazing finishes.

step 1

An experienced consultant will visit you to fully understand your specific requirements, what you need to achieve and the type of product required and also conduct a survey of the relevant area.

step 2

Our consultants will then liaise with our team of experienced, dedicated designers to ensure that your brief is effectively communicated and accurately translated.

step 3

Our consultant will now present you our concept to ensure that we have accurately translated the brief and to take on board any tweaks, amendments or suggestions.

step 4

Our team of designers can offer 3-D photo-real imagery of our concepts which bridge the gap from concept to creation and aid substantially with any internal approvals which may need to be gained.

step 5

Our team of skilled craftsmen will now turn your concept into reality, using traditional skills & the latest technology to ensure that the highest levels of craftsmanship are continually maintained.

step 6

Our experienced installation teams will now install the finished product, taking care to ensure that the whole process is as seamless and hassle free as it can possibly be.

Please contact the frem sales team on 01604 671 700 for more information on how we can help you maximise your storage potential.
