Fifth Wheel Auto Lubricant Wheel Liner

A 5th Wheel Auto Lube Liner is most logical, commercial and environmentally friendly option on the market for all haulage and logistic businesses reducing costs, risks and the impact on the environment.

With transport companies looking to reduce cost and increase productivity and also striving to become more efficient and effective, a Fifth Wheel Liner could be the answer. In addition modern times are calling on us all to play a part in protecting our environment and to become more of the impact of our actions on our surroundings.

5th Wheel Key Facts

- Millions of pounds of grease are washed off 5th wheels in this country every year. This not only has a huge impact on the environment causing water pollution but is also extremely costly to haulage and logistic businesses.
- During application a significant amount of grease is either dropped in the workshop or falls off onto the tractor unit making the tractor unit dirty, unsightly and uncomfortable to work in.
- Greasy residue on surfaces and on the ground can prove hazardous during hitching and can cause individuals to slip on the ground and on the back of tractor units. This has considerable implications from a health and safety view point in and in particular from an employer's liability perspective.
- On average 30% of 5th wheel grease is wasted
- It is critical to apply the correct amount of grease. Insufficient grease poses the risk of friction, welding the 5th wheel to the king pins and plate which will then need to be replaced. The over application of grease results in significant wastage as it is either pushed off by the trailer or washed off by rain/road spray.

5th Wheel Auto Lube Key Benefits

- A 5th Wheel Liner is a self lubricating hard poly, there is absolutely no need to grease the 5th wheel once attached. As it wears the Liner releases enough lubrication to prevent any damage to the 5th wheel or trailer plate.
- A Fifth Wheel Liner completely covers and protects the fifth wheel from the elements.
- Eliminating grease application will greatly reduce the need to stream clean excess grease from trailer yards, workshops and tractor units saving on resources and costs.

Installed on most Fifth Wheels within 20 minutes, fitting accessories are supplied with each cover.

Proven to Eliminate Crabbing

Reduces Expenditure on Oils & Grease

Improves Health & Safety

Environmentally Friendly

Reduce Fuel Consumption

Proven Cost Savings

Reduced Maintenance Procedures
