TrailerCheck 4 Vans

A Trailer Lighting & ISO Can Line Tester Better Than A Scrutineer!

TrailerCheck 4 Vans is the Ultimate Trailer Service Tool and Diagnostic Tester for Trailers.

TrailerCheck 4 Vans beats a Scrutineer Tester by its weight & up to date technology. TrailerCheck 4 Vans is a lot lighter than its competitor and with its Hand Held Remote Brake Activator there is no need for a second person to be pressing brakes while the other is under the trailer. Up to date electrical technology used to produce the TrailerCheck 4 Vans enables safe trailer servicing and repairing.

Designed to be installed in a van or workshop, the TrailerCheck 4 Vans will power, test air brakes and with Code Talk Remote read / clear the ECU of a commercial trailer.

An intelligent unit, the TrailerCheck 4 Vans pulses the lighting circuits to conserve battery power and will not burn out short circuits. Powered on for 2 seconds and then off for 1, TrailerCheck has the capability to power multiple trailers. In diagnostic mode a single circuit can be powered for fault finding, TrailerCheck is also protected against short circuits, if so the micro processor will keep resetting with a back up fuse as protection.

Two air test gauges are incorporated within the TrailerCheck with a hand held remote brake activator and digital pressure gauge, one operator can be under a trailer activating brakes and reading pressures.

Switching brakes on and off allows the user to look for wear in s cams and faulty slack adjusters, activating the brakes while under the trailer operators are able to see all components working to identify faults and wear. The digital pressure gauge measures pressure at the brake chamber, ideal for setting load sensing valves.

EBS Trailers can be tested for CAN line integrity, a quick and simple test to confirm the CAN lines are OK or at fault.

For Trailer Diagnostics (ECU code reading & Clearing), add the Code Talk Remote. Code Talk can remotely control the TrailerCheck 4 Vans, no more walking up and down the trailer, information on voltages and wire colours Code Talk Remote is the ideal complement to the TrailerCheck 4 Vans.

Ask for a Code Talk Brochure for more information.
