EBS / ABS Sensor Master

The Ideal Test Meter For All Commercial Repairers

Any workshop requires fast, accurate and effective tools to diagnose faults easily and quickly. A high percentage of brake EBS/ABS faults are around the sensor or the sensor itself.

The EBS/ABS Sensor Master is an easy to use device which will confirm each EBS/ABS sensor is operational and effective. By connecting to the sensor socket on each wheel, individual sensor faults can easily be identified.

The Master also tests for any damaged teeth or alignment of the exciter ring and the distance between the ring and sensor. It can also be used for setting up new sensors distance gap.

Many workshops have used the tester to great affect, a few common points stated are:

Ease Of Use

Time Effective

Cost Effective

The Master can be used in a workshop, on site or even for side of the road repairs, no wheel removal is required and a full test can be concluded in less than 10 minutes.

The Master is the ideal tool for any user, from an apprentice to a time served fitter or a busy workshop. Quickly identifying and clearing the fault can save time and money, rather than calling in a dealer or diagnostic expert.

The Master is powered by a PP3 internal battery and has a low battery warning light.

- Tests Each EBS / ABS Sensor
- Tests The Exciter Ring for Damage & Alignment
- All Tests Complete Without Wheel Removal
- Fits To All Sensors with Leads Supplied
- Very Easy To Use
- Hand Held & Light Weight
- Accurate Test
- Ergonomic Case
