MI Witness Two Channel Vehicle Incident Camera

The new Mi Witness HD has been designed with major motor manufactures and insurance companies to give the user the best features for capturing video evidence in the event of an accident.

It has been designed to be as robust and reliable as possible due to its design and internal chip set.

This camera is ideal for the following vehicles such as Police, Ambulances, Fire Service, Couriers, Hauliers, Taxi, Fleet operators and Private Cars and many more.

With the advent of in vehicle camera systems, motorists have never been better protected. Honest motorists can now fight back with a vengeance. In any vehicle crash, there is a risk that third parties will either incorrectly recall or deliberately attempt to misrepresent what actually happened and this can be easily countered if you have video footage of the accident.

Video evidence from the MI Witness can assist your car insurance company to process your claim more efficiently and it prevents a stand off scenario whereby your insurer and that of the other driver are unable to agree which party was at fault.

2 Channel Video

The MI Witness has a second video channel (640x480 @ 15fps), ideal for recording in another direction. MI Witness has options for internal or external cameras.

Smart Power

The MI Witness offers both smart shutdown technology and cordless power for portable recordings. Smart Shutdown technology protects your video files in the event of the power being disconnected so you don't lose important video files. Cordless power allows you to take the camera from its mount and use the MI Witness as a portable camera to record the incident from multiple positions allowing you to gather even more evidence. The internal battery power in the MI Witness will last approx 20-30 mins.

Portable Video / Snap Shot Feature

With its on board battery you can now walk around the incident taking photos & video

mi

- Provides irrefutable evidence in the event of a road traffic accident.
- Combats false whiplash claims
- Reduces the time taken to settle a claim.
- Saves protracted lengthy claims when no evidence is available.
- Proven reductions in unsafe driving behaviour
- Has been proven to modify driver behaviour
