X-Driven Easy Installed On Board Camera

With the corporate manslaughter bid becoming more prominent the need for company owners and directors to be positive in making sure driving standards are observed and to improve on reporting of RTA's (road traffic accidents) for insurance claims and witness data.

aide automotive have introduced the X-Driven Driving Recording System. The X-Driven is a hand held portable camera system for any vehicle or it can act as a witness for crime, theft or third party RTA's.

Simply sitting on the dashboard or attaching to the windscreen the X-Driven is powered by the cigarette lighter or can be fully wired into the vehicle cab. The X-Driven will record and store data for any sudden 'shock' movements such as harsh braking, vehicle impacts or excessive acceleration. The X-Driven can also be dismantled and carried to record damage at the rear of the vehicle or general accident information such as loading or delivering damage.

By plugging the SD card into the PC, X-Driven will give the exact time and location of any incident as well as displaying video footage of the view through the windscreen and the speed at which the vehicle has travelled.

The X-Driven is an indisputable recorded witness in insurance claims, and is also the ideal method for observing the driving standard of fleet drivers.

- **Downloads Video Footage to PC in Seconds**
- **Easy to Install**
- **Ideal Witness In Insurance Claims**
- **Records On G Shocks (Collisions)**
- **Ideal For Driving Training**
- **Records Harsh Braking**
- **Hand Held & Light Weight**
- **Portable**
