Solo Diesel The Solution to Vehicle Mis Fuelling

SoloDiesel answers the growing problem of mis fuelling diesel vehicles with petrol. It's estimated that at least 150,000 drivers put the wrong fuel in their car each year, one every three and a half minutes!

SoloDiesel is a smart device that is a direct replacement for the filler cap, simply unscrew and remove the cap, then screw the SoloDiesel device in its place. Once installed proceed as normal to refuel with a diesel nozzle. Once inserted the device will accept the nozzle and open up a internal latch to let fuel flow to the tank. If a petrol nozzle was entered it would butt up against the device, will not open the latch and quickly alert the wrong nozzle is being used.

With the high cost and inconvenience of a diesel engine being filled with petrol, this device will cut out expensive repair costs and vehicle downtime. If a diesel car is driven after being mis fuelled, major repairs may be needed, costs can vary anywhere between £300 to £8,000. Insurance companies are looking to stop offering cover against mis fuelling!

After 3 years of research, development & testing the SoloDiesel was born. A new and innovative product which physically prevents mis fuelling of diesel powered vehicles.

Get your own SoloDiesel mis fuelling protection and prevention system as soon as possible and forget about mis fuelling for good.

- **Stops Mis Fuelling at the Pumps**
- **No Vehicle Downtime**
- **Easy To Fit**
- **Cost Effective Against Mis Fuelling**
- **100% preventive, NOT A Warning!**
- **Protects from the growing problem of fuel theft**
- **Over 100,000 Drivers Miss Fuel per year**
- **3 Years In Development**
