

aideing the automotive industry with state-of-the-art solutions... every time !!

PressurePro™

Live Tyre Pressure Monitoring

PressurePro™ is a wireless, electronic tyre pressure Monitoring system, which can alert low tyre pressures, giving you added safety and economy while driving. This latest state-of-the art system is reliable, durable, accurate and easy to install! PressurePro™ is today's latest, high-tech product in tyre pressure Monitoring system technology.

PressurePro™ has two basic components: Sensors, which are screwed on to each tyre's valve stem, and a small portable dashboard Receiver/Monitor. The sensors continuously assess the air pressure in each tyre and when it drops below an automatically set pressure level, a signal is transmitted to the dashboard monitor. A flashing tyre position light, an audible beep, and the real-time pressure, alerts the operator to the low-pressure tyre. Should a tyre pressure continue to drop, a second more urgent alert beeps again.

PressurePro™ can be used on cars, caravans, motor homes, trucks, trailers, commercial and towed vehicles.

Merely press the Up or Down button on the monitor; a scroll will be initiated to disclose each tyre's real-time pressure. However, if the tyre pressure falls to dangerous levels, the system automatically alerts at a fall by 12.5% and again at 25%.

All drivers have been faced with a situation where they wonder if the sound they hear or the wobble in the road is an indication that a tyre problem has developed. With the PressurePro™ System the tyre pressure can be checked instantly. PressurePro™ will also reduce incidents from blow outs.

- **Reduce Fuel Consumption**
- **Increase Tyre Life**
- **Live Pressure Data**
- **Up to 34 Tyres Measured**
- **Very Easy To Use**
- **Easy to Install**
- **Accurate Test**
- **Environmentally Friendly**
