The VARIUS in double stroke

For maximum wash performance

VARIUS TAKT

The proven roll-over wash unit VARIUS is now also available in takt design.

The highlights:

- Wash capacity 2.000 to 4.000 washes per month.
- Galvanized / painted frame made from 6 mm sheet steel.
- Passage width 2.400 mm in mirror area.
- Free colour selection according to Christ AG's colour palette.
- Striking unit panelling.
- Pivotal roof blower in basic model

The wash unit

Electronically controlled wash cylinders guarantee even and gentle detection of every auto body form. Vehicle surfaces are washed in one forward and one return cycle, during which the brush direction is automatically changed.

Complete centre cross-over washing by the side cylinders in the front and rear area.

User-friendly

The unit's control and wash agent components are integrated in the rollover unit's portal side beam.

Comfortable accessibility is guaranteed.

Technical superiority wrapped in an eye-catching design - the pivoting roof blower.

Contour scanning operates via a light barrier system. This is the only way possible to maintain a low distance to the vehicle. The complete drying device made from aluminium is pivoted at a 30° angle on the vehicle's front and rear areas. This enables the air stream to be perfectly guided onto the vehicles' contours.
