Achieving high standards through a quality driven investment in technology and skills...

Since 1993 Vaplas has been providing a comprehensive plastic machining and fabricating service to some of the best known brands names in the UK. Quality driven and committed to continuous improvement and investment, our aim is to exceed client expectations every time.

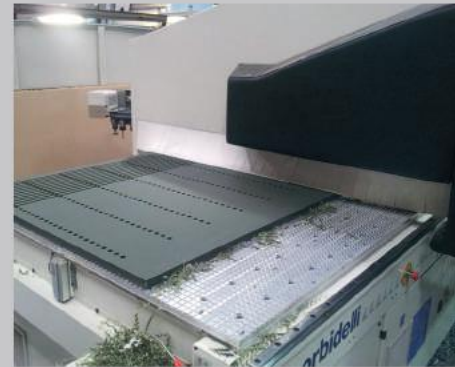

## ROUTING

Professional, precise and prompt are the watchwords for every project undertaken by Vaplas, and our investment in CNC routers with full CAD-CAM operation and 4th axis units ensures a routing service which delivers on all three counts.

We are able to produce almost any cut shape from an extensive range of industrial plastics, achieving an exceptional standard of finish and accuracy every time.

Our skilled team of machinists will work proactively with you, assisting with problem solving during the design process and recommending cost saving options.

## FABRICATING

Complex 'intelligent' machinery combined with highly trained fabrication machinists ensures a fabrication service which is accurate, timely and highly competitive. Utilising pioneering technology and the latest CAD-CAM software, Vaplas works with the best quality thermoplastic materials to ensure superior solutions..

From machine guards to fabricated tanks, Vaplas ensure premium quality fabrications using the latest technologies in bending, welding and bonding.

## CNC MACHINING

Vaplas CNC Machining processes are accurate, fast and repeatable, ensuring flexibility on quantities.

We produce an extensive range of parts and products for varied industries including aerospace, food processing, automotive, agricultural, water treatment, beverage, general manufacturing...

Plan, design, produce and deliver on time and on budget - from prototype to final product - our experienced team provides a seamless service which ranges from bespoke one-off items to large batches.
