There are three different models to choose from, remote controlled with multiple UV intensities, UV on/off button only, and UV and visible light on/off buttons only.

The GX Series family of products has been specifically designed to meet the ASTM E3022-15 and ISO 3059-12 standards as well requirements set by the PRIMES. The optics used in the GX Series meet the Rolls-Royce RRES 90061 specification. The beam profile of the UV light is extremely homogenous without any footprints showing from the LEDs, shades, dark spots or other disturbing defects.

All GX Orion models have a built-in PLC interface designed to connect to your PLC system. You can chose a "mother" or a "slave" GX Orion unit, with or without remote panel, with or without on/off power switches and still be able to monitor the unit completely through your computer via the PLC interface.

**GX Orion REMOTE**

GX Orion REMOTE has been tested to comply with both ASTM E3022-15 and ISO 3059-12 standards. It generates an intensity that can be adjusted to vary from approximately 1 500 to 7 000  $\mu\text{w}/\text{cm}^2$  at 38 cm (15 inches). It has a powerful white light that can generate 1 000 lux (93 fc) at 30 cm (12 inches). A remote control allows you to switch on/off the UV and White Light, change the intensity and set up the timer from up to 5 meters (16 feet) away.

# Apollo 2.0

Radiometer/photometer measuring UV and visible light via a wireless sensor. Apollo 2.0 is traceable to NIST (National Institute of Standards and Technology) and is in compliance with ISO 3059-12.

**WIRELESS SENSOR**

Measures up to a distance of 5 meters (16 feet) from the Reader unit.

**RED LCD SCREEN**

Red LCD screen for easy readings in a dark environment and a peak function to identify the highest reading.

**BATTERY POWERED**

Reader unit powered by three "AA" batteries that last 100 hours of active measurement. Sensor unit powered by one "1/2 AA" lithium battery that lasts 600 hours of active measurement.

**An instrument for accurate measurement** of UV-A irradiation and visible illumination. Extra engineering effort is taken to make an accurate measurement of visible light emission from a UV-A lamp by incorporating a superior band pass filter containing only non-fluorescent filters. The instrument provides fast measurement as it offers auto ranging and concurrent measuring of visible light and UV-A irradiation. It is ergonomic and easy to use due to its light weight chassis, wireless sensor unit and compact size. Apollo 2.0 is traceable to NIST (USA's National Institute of Standards and Technology).

Sensor measurements and transmission of data is done via Bluetooth. The wireless sensor enables the user to measure from a distance of up to five meters. This feature ensures that the sensor unit is stable and no movement occurs from connecting cables during measurement. Each sensor unit has both the UV and White light sensors incorporated on it.

Apollo 2.0 comes as a single kit or as a double kit. The single kit includes one reader unit and one wireless sensor unit. A double kit includes one reader unit and two wireless sensor units. As only the sensor needs to be send for calibration, the double kit is a convenient tool so that operations are never disrupted. Please note that Aerospace companies that are audited by Nadcap must send in both the reader and the sensor when calibrating.

The meter features hold and peak functions. The Hold function stores the present value measured and the Peak button stores the highest value measured.

**PLATES CAN BE USED INTERCHANGEABLY**  
 Different size plates can be used interchangeably on the stand. All BB Series lights can be measured using the same large size plate.

**APOLLO 2.0 READER UNIT**

The wireless feature allows accurate readings of the UV intensity, preventing accidental movements from connecting cables. Apollo 2.0 can provide readings from a distance of 5 meters (16 feet).

**APOLLO 2.0 SENSOR UNIT**

Apollo 2.0 compact wireless sensor can be placed at a fixed position on the Olympos stand, providing accurate UV readings for all handheld Labino UV lights. All BB Series lights can be measured using the same large size plate.

**Over the last 3 years the NDT industry** has adopted new standards for LED blacklights, authored by ASTM (i.e. ASTM E3022-15) and the PRIMEs (i.e. Rolls-Royce RRES 90061, AIRBUS AITM6-1001), to ensure that the properties and quality of the UV lights used are suitable for NDT inspections. Labino has in its product portfolio UV lights that are tested to comply with all relevant ASTM, ISO and PRIMEs requirements. These requirements as well as the various checklists of NDT Technicians, such as NADCAP compliant technicians, require frequent tests and measurements of the UV lights from 15 inches (38 cm).

Labino is proud to introduce to the market, Olympos, the first measurement stand for UV lights, especially designed to conduct such measurements and help NDT professionals to remain in compliance with the pledged standards.

Olympos measurement stand comes with three different size plates that can be used interchangeably on the stand. This enables all Labino LED blacklights (UVG Series, MB Series, BB Series) to be measured from the same distance using the Labino Apollo 2.0 UV and White light meter or any other meter.

**MEASURING MB SERIES UV INTENSITY WITH OLYMPOS**

The MB Hercules, MB Zeus, MB Hermes and MB Iris can all be measured using the same medium size plate.

**MEASURING UVG<sub>3</sub> UV INTENSITY WITH OLYMPOS**

The UVG<sub>3</sub> Spotlight, UVG<sub>3</sub> Midlight and UVG<sub>3</sub> Floodlight can all be measured using the same small size plate.

**THREE DIFFERENT SIZE PLATES THAT FIT ALL LABINO HANDHELD LIGHTS**

Olympos measurement stand comes with three different size plates that can be used interchangeably on the stand. This enables all Labino handheld LED blacklights (UVG Series, MB Series, BB Series) to be measured with accuracy. The large plate is used to measure BB Series lights, the medium plate is used to measure MB Series lights and the small plate is used for all UVG Series lights.

# Labino MPXL Lamps

These highly durable products with an easy to operate design offer more UV intensity and less weight, making your job easier and more efficient.

**Labino MPXL lamps** are available with a variety of features to give operators of black lights the opportunity to choose what best suits their needs. The choice of a model depends on the conditions under which an operator is using these lamps. Does an inspection need to cover small areas or large areas? Does it involve difficult structures and therefore a lighter lamp is required? Do they simply need more power or less power can suffice? We can accommodate all needs. Simply choose among the available features below.

Labino MPXL lights utilize 50 W and 35 W lamps. Depending on the model, choose between battery operated or mains operated or choose both (SuperXenon). Labino's new model, the SuperXenon, can carry a powerful 50 W lamp generating very high intensity and the docking battery can be switched into mains, and vice versa. Both power supplies can be used on the same unit. Most models are less than 3 kg (6.6 lbs) and are available with your choice of "no handle" (for easy mounting on benches or other areas), a "top handle" or a "pistol handle". All Labino MPXL models are available with spotlight, midlight or floodlight beam.
