Optimum syringe barrels are molded from a proprietary polypropylene blend that gives them exceptional clarity and chemical compatibility. Pistons are made of polyethylene. Reservoirs available in clear for most fluids; transparent amber for UV and light sensitive materials (*240 to 550nm); and opaque black. Black ensures complete light blockage. Each box contains an equal number of barrels and pistons. LV Barrier sets include tip caps and are designed for cyanoacrylate and very low viscosity fluid dispensing.

Adapter heads with Buna-N O-ring, flexible polyurethane air hose (3/32" ID x 5/32" OD), male quick-connect and safety clip. For general use.

Channeled, double-wiper piston eliminates trapped air, waste and dripping

Uniform barrel wall for safety

0° taper barrels for smooth top-to-bottom piston travel

Threaded tip hubs for safe, secure attachment

Consistent color coding and tip diameters, regardless of style/length

Tips are free of burrs and flash that could obstruct fluid flow

SMOOTHFLOW POLYETHYLENE PISTONS

Optimum pistons mate perfectly with syringe barrels and are available in six styles to ensure control for virtually any fluid in any application.

White SmoothFlow pistons are used with most fluids. Beige pistons are loose fitting and used with air-entrapped fluids. Red pistons are tight fitting and used with mechanical dispensers. Orange flat-walled pistons prevent "bouncing" when dispensing stringy fluids. Blue LV Barrier™ pistons are used with cyanoacrylates and very low viscosity fluids. Clear Flex pistons are flexible and reduce "bouncing" in viscous fluids while maintaining excellent wall-wiping.

Use with gel cyanoacrylates, UV-cure adhesives, sealants, and particle-filled materials or any medium to high viscosity fluid. Standard tips are molded of polyethylene with UV-light block additive. Rigid, opaque tapered tips are molded of polypropylene and the opacity delivers light-blocking functionality.

THE KEY TO PRODUCTIVE DISPENSING

The right amount of material at the right place is what dispensing is all about. Most assembly fluids are easy to set up and use, and with EFD dispensing products, you get precise deposits without any problems.

4 SIMPLE RULES TO REMEMBER:

- Small deposits** — small tips, low pressure, short pulse time
- Big deposits** — larger tips, higher pressure, longer time
- Thick fluids** — tapered tips, higher pressure, time as required
- Watery fluids** — small tips, low pressure, time as required

FLUIDS THAT REQUIRE SPECIAL HANDLING ARE DESCRIBED BELOW WITH RECOMMENDATIONS.

CYANOACRYLATES AND SOLVENTS

Syringe Barrels/Pistons:

Use a 3cc, 10cc or 30cc clear syringe barrel. Fill about 1/2 full and insert a blue LV Barrier™ piston just below the top of the barrel. Do not press against the cyanoacrylate. The piston stays at the top of the barrel, allowing air through to make a deposit and vacuum to prevent dripping. For gel cyanoacrylate, specify the white SmoothFlow™ piston. Fill barrel 2/3 full and push the piston down until it contacts the fluid.

Dispense Tips:

For watery cyanoacrylates, specify the PTFE-lined tip #7018388 or the short flexible tip #7018366. To drag cyanoacrylate or reach into recesses, use the long flexible tip #7018362. For gel cyanoacrylates, the tapered tip #7018391 is a good choice. No scratching. No metal to react with the cyanoacrylate. For microdots, use #7018433 or #7018462 stainless tips.

RECOMMENDED SYSTEM

Size	Cyanoacrylates Standard Adapter		Solvents Polypropylene Adapter		Clear Barrels Blue LV Barriers Pistons Tip Caps	
	QTY		QTY		QTY	
3cc	7012341	1	7012067	1	7012075	50
10cc	7012339	1	7012065	1	7012118	30
30cc	7012338	1	7012064	1	7015116	20

Note: Always use fresh cyanoacrylate with new components. Remember to protect against moisture and use a coalescing filter regulator (part #7016548) on the plant air supply to your dispenser.

ANAEROBICS AND OILS

Syringe Barrels/Pistons:

Use any convenient size clear barrel. Fill barrel about 2/3 full. Insert a white SmoothFlow piston until it contacts the fluid.

Dispense Tips:

For best fluid control, we recommend using the smaller gauge stainless steel precision tips or the all-plastic polypropylene tips. For microdots, consider the smaller size barrels. For low viscosity wicking anaerobics, use the LV Barrier piston.

55cc	7012338	1	7012153	15	7012198	50

UV-CURE/LIGHT SENSITIVE ADHESIVES

Syringe Barrels/Pistons:

Select from transparent amber for UV and light-sensitive materials (*240 to 550nm); and opaque black to ensure complete light blockage. Fill barrel about 2/3 full. Insert a white SmoothFlow piston until it contacts the fluid.

Dispense Tips:

Standard, flexible translucent tips are molded of polyethylene and contains a light-blocking additive that protects UV-sensitive fluids. Rigid opaque tips are molded of polypropylene and the opacity of the material delivers light-blocking functionality to protect light-sensitive fluids. When using other tips, order the 3cc barrel opaque tip shield #7017715 or #7017717 for 5cc to 55cc barrels.

EPOXIES, SEALANTS AND PASTES

Syringe Barrels/Pistons:

Size depends on dispense requirements. Most thick materials work well with the white piston. However, if you see too much piston bounce with stringy sealants, switch to the orange flat-walled piston. For bounce issues with thicker material, specify the clear flex piston.

Dispense Tips:

The SmoothFlow tapered tips provide the best dispensing for most fluids including thick pastes and particle-filled materials. For thicker fluids with a tendency to string, try using a smaller gauge tip and increase the air pressure. For extremely thick materials requiring small deposit control, consider one of the HPx Series high pressure tools. Contact EFD for details.

IMPORTANT SAFETY INFORMATION

All Nordson EFD disposable components, including syringe barrels, cartridges, pistons, tip caps, end caps, and dispense tips, are precision engineered for one-time use. Attempting to clean and re-use components will compromise dispensing accuracy and may increase the risk of personal injury.

Always wear appropriate protective equipment and clothing suitable for your dispensing application.

Do not exceed maximum operating pressure of 100 psi (7.0kg/cm²).

Do not heat syringe barrels or cartridges to a temperature greater than 100°F (38°C).

Dispose of components according to local regulations after one-time use.

Do not clean components with strong solvents (e.g. MEK, Acetone, THF).

Cartridge retainer systems and barrel loaders should be cleaned with mild detergents only.

To prevent fluid waste, use EFD SmoothFlow™ pistons.
