

Quality products for Mechanical
& Fluid Power

RUPEX[®] PIN & BUSH COUPLINGS

N-EUPEX[®], RUPEX[®] and N-BIPEX[®]
Flexible Couplings

Flexible Flender couplings have a wide range of possible applications. A broad standard modular system as well as specially designed application specific couplings are available.

N-EUPEX
 cam couplings
 Rated torque: 19 Nm ... 85,000 Nm

RUPEX
 pin-and-bush couplings
 Rated torque: 200 Nm ... 1,300,000 Nm

N-BIPEX
 cam couplings
 Rated torque: 12 Nm ... 1,300 Nm

ELPEX[®], ELPEX-B[®] and ELPEX-S[®]
Highly Flexible Couplings

ELPEX[®] couplings are free of circumferential back-lash. Their damping capacity and low torsional stiffness make them especially well-suited for coupling machines with widely variable torque characteristics or large shaft misalignment.

ELPEX
 elastic ring couplings
 Rated torque: 1,600 Nm ... 90,000 Nm

ELPEX-B
 elastic tire couplings
 Rated torque: 24 Nm ... 14,500 Nm

ELPEX-S
 rubber disk couplings
 Rated torque: 330 Nm ... 63,000 Nm

ZAPEX[®] gear couplings and ARPEX[®] all-steel couplings
Torsionally Rigid Couplings

For transmission of high torques, we offer both ARPEX all-steel disc couplings and ZAPEX gear couplings in a range of versions. The applications vary according to specific requirements, with respect to shaft misalignment, temperature and torque.

ZAPEX
 gear couplings
 Rated torque: 1,300 Nm ... 7,200,000 Nm

ARPEX
 high performance disc couplings
 Rated torque: 1,000 Nm ... 80,000 Nm

N-ARPEX and ARPEX
 all-steel disc couplings
 Rated torque: 92 Nm ... 2,000,000 Nm

BIPEX-S[®] and SIPEX[®]
Backlash-Free Couplings

The vibration-damping, electrically insulating plug-in BIPEX-S elastomer couplings and SIPEX metal bellows couplings deliver especially accurate component positioning.

BIPEX-S and SIPEX
 Rated torque: 0.1 Nm ... 5,000 Nm

FLUDEX® couplings are hydrodynamic fluid couplings which operate on the Fottinger principle.

FLUDEX® couplings limit starting and maximum torque in the drive train and, through the property of rotational slip, serve as an aid to starting the motor, as overload protection in the event of fault and for isolating torsional vibration. To compensate for shaft misalignment, the FLUDEX® coupling is combined with a displacement coupling e.g. of the N-EUPEX® type.

Railway Couplings

Couplings for rail vehicles developed, tested and produced for reliability and safety.

ZBG series [read info ...](#)

LBK series [read info ...](#)

GKG series [read info ...](#)

MBG series [read info ...](#)

MBG-ISO series [read info ...](#)

ARS series [read info ...](#)

Couplings designed for partially and fully suspended drives which can be mounted between motor and gear unit or gear unit and wheel-set shaft. Designed and tested to withstand the high forces created by axle loads of up to 32 t, motor speeds of over 6,000 rpm and driving speeds of more than 400 km/h. All models tested under extreme conditions to guarantee maximum reliability. A broad range of products in all necessary sizes and designs as standard.

FLENDER Railway Couplings offer:

- » High quality.
- » 100% component traceability.
- » Great depth within an extensive product range.
- » Component compatibility with Flender gear units for rail vehicles.
- » Low maintenance costs and a high level of serviceability.

New distribution partnership in the UK: We have now partnered with **jbj Techniques Limited** as the official partner for our whole couplings range in the United Kingdom and kicked off our cooperation by a digital signing of the partnership contract. JBJ has a wealth of experience in established and niche applications, such examples are: Mechanical drives for subsea wave energy, steel works crucible handling equipment or marine winch drives. We are happy to have them on our side for our UK coupling customers, especially for the supply of the recently optimized N-EUPEX!

Get to know the industry benchmark in couplings and reach out to **Mat Jackson**, Product Manager Couplings at Flender UK, and **Mike Davis**, Managing Director at JBJ for further queries.

Learn more about our couplings range here: <https://lnkd.in/dAir-av>

#flender #couplings #neupex #newpartnership #cooperation #WeMoveTheWorld

Coupling suitable for use in potentially explosive atmospheres.

Complies with the current ATEX Directive for:

- CE  II 2G Ex h IIC T6 ... T4 Gb X
-  II 2D Ex h III C T85 °C ... 110 °C Db X
-  IM2 Ex h Mb X

RUPEX[®] pin and bush couplings link machine shafts and compensate for shaft misalignment with weak restorative forces. The torque is conducted through elastomer elements, so the coupling has typically flexible rubber properties. Thanks to their robust design, RUPEX[®] couplings are also suitable for harsh operating conditions.

Benefits

RUPEX[®] couplings can also hold loads when overloaded and are therefore especially suitable for drives for special safety and reliability requirements. Torque shock loads and changing loads are no problem for robust, compact flexible RUPEX[®] couplings. The steel variant is especially suitable for high-speed drives. RUPEX[®] couplings are fitted by putting together the coupling halves. Fitting with low torsional backlash is simplified by the barrel-shaped geometry of the buffers. RUPEX[®] couplings require little maintenance. Only the elastomer elements, as wear parts, need be replaced and the coupled machines do not need to be moved to do so. RUPEX[®] couplings are suitable for reversing operation and horizontal and vertical fitting or fitting at any required angle.

Application

RUPEX[®] couplings are available as a catalogue standard in 26 sizes with a rated torque of between 200 Nm and 1,300,000 Nm. The coupling is suitable for use at ambient temperatures of between -30°C and +80°C. By using alternative elastomer elements, the permissible ambient temperature range can be extended to between -50°C and +100°C. Frequently, the coupling is used to connect the gear shaft to the driven machine. In the case of drives without gear units, the coupling is particularly suitable for operation in harsh conditions or heavy-duty drives with electric motor drive. Ventilator drives with high ventilator mass and drives in the cement industry are typical applications. Examples of particularly safety-relevant areas of application are cable railway drives, lifting gear for crane drives or escalator drives.

Design and Configurations

A RUPEX[®] coupling comprises two hub sections which are mounted on the machine shafts. The hub parts are connected positively by steel pins and elastomer elements. The coupling can be fitted with add-on parts such as brake disks or brake drums. Up to size 360, the pins and buffers are fitted on one side. From size 400 up, the pins and buffers are fitted in the hubs on alternate sides.

Materials

- » Hubs: Types RWN and RWB made of grey cast iron EN-GJL-250.
Types RWS and RBS made of steel.
- » Flange: Types RFN, RFS made of steel.
- » Pins: Material steel 42CrMo4, surface fine-machined.
- » Brake disks: Type RWB made of EN-GJS-400 spheroidal graphite cast iron.
Type RBS made of steel.
- » Brake drums: Type RWB made of EN-GJL-250 grey cast iron.
Type RBS made of steel.

Buffer material

Material/description	Hardness	Marking	Ambient temperature
NBR standard type	80 ShoreA	Element black	-30 °C ... +80 °C
NBR electrically insulating	80 ShoreA	Element green	-30 °C ... +80 °C
NBR soft	65 ShoreA	Element black with green dot	-30 °C ... +80 °C
NBR hard	90 ShoreA	Element black with magenta dot	-30 °C ... +80 °C
NR for low temperature	80 ShoreA	Element black with white dot	-50 °C ... +50 °C
HNBR high temperature	80 ShoreA	Element black with red dot	-10 °C ... +100 °C

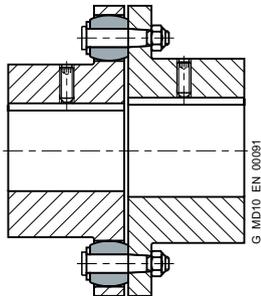

RUPEX pin and bush coupling types

Type	Description
RWN	Coupling made of grey cast iron
RWS	Coupling made of steel
RWB	Coupling made of grey cast iron with brake drum or brake disk
RBS	Coupling made of steel with brake drum or brake disk
RFN	Coupling made of grey cast iron in flange-shaft variant
RFS	Coupling made of steel in flange-shaft variant

RUPEX pin and bush coupling types on request

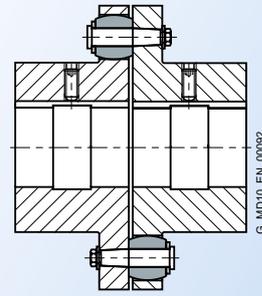

Type	Description
All	Coupling with axial backlash limitation
	Coupling with pretensioned elements
	Coupling with lengthened pins and spacer sleeves
RKS	Coupling for engaging/disengaging during standstill
RWNH, RWSH	Coupling with extension piece
RBM	Coupling with lengthened pins for sliding rotor motors
RAK	Coupling combination RUPEX with ARPEX all-steel membrane coupling

Further application-related coupling types are available.
Dimension sheets for and information on these are available on request.

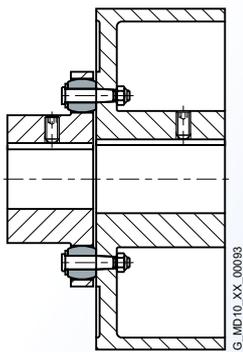

up to size 360

Types RWN/RWS – One-sided arrangement of pins and buffers

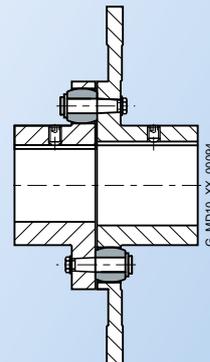

from size 400

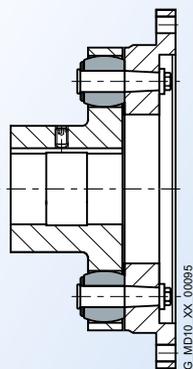

Types RWN/RWS – Alternate-sided arrangement of pins and buffers

Types RWB/RBS with brake drum

Types RWB/RBS with brake disk

Types RFN, RFS

Function

The motor torque is transmitted to the hub on the drive side via the shaft-hub connection, which is mostly designed as a keyway connection. With the aid of elastomer elements mounted on steel pins, the torque is conducted to the hub on the output side. The hub on the output side further transmits the torque to the driven machine or a gear unit located in between. Because of the primarily compression-loaded elements, the coupling has a progressive torsional stiffness.

For maximum coupling torque:

$$T_{Kmax} = 3,0 \cdot T_{KN}$$

For overload torque:

$$T_{KOL} = 4 \cdot T_{KN}$$

For coupling fatigue torque:

$$T_{KW} = 0,20 \cdot T_{KN}$$

Note

For fitting, the maximum gap dimension of $S_{max.} = S + \Delta S$ and the minimum gap dimension of $S_{min.} = S - \Delta S$ are permitted.

¹⁾ The maximum speed for the respective type must be noted.

For additional information on the allowable shaft misalignment, please refer to the operating instructions.

Torsional Stiffness and Damping

The values stated in the previous table on page 4 apply to a capacity utilization of 50 %, an excitation amplitude of 10 % TKN with the frequency 10 Hz and an ambient temperature of 20 °C. The dynamic torsional stiffness is load-dependent and increases in proportion to capacity utilization. The following table shows the correction factors for different rated loads.

$$C_{Tdyn} = CT_{dyn} 50\% \cdot FKC$$

	Load TN / TKN							
	20%	40%	50%	60%	70%	80%	90%	100%
Correction factor FKC 65/80/90 ShoreA	0.51	0.83	1	1.18	1.38	1.58	1.8	2.03

The damping coefficient is $\Psi = 1.4$

Torsional stiffness and damping is further dependent on the ambient temperature and the frequency and amplitude of the torsional vibration excitation. More precise torsional stiffness and damping parameters on request.

With flexible couplings the manufacturing process of the rubber elements and their aging primarily influence the stiffness value CT_{dyn} . For this reason calculation must be made with a tolerance for the dynamic stiffness of $\pm 20\%$. The specified damping coefficient Ψ is a minimum value with the result that the damping performance of the coupling corresponds at least to the specified value.

Permitted shaft misalignment

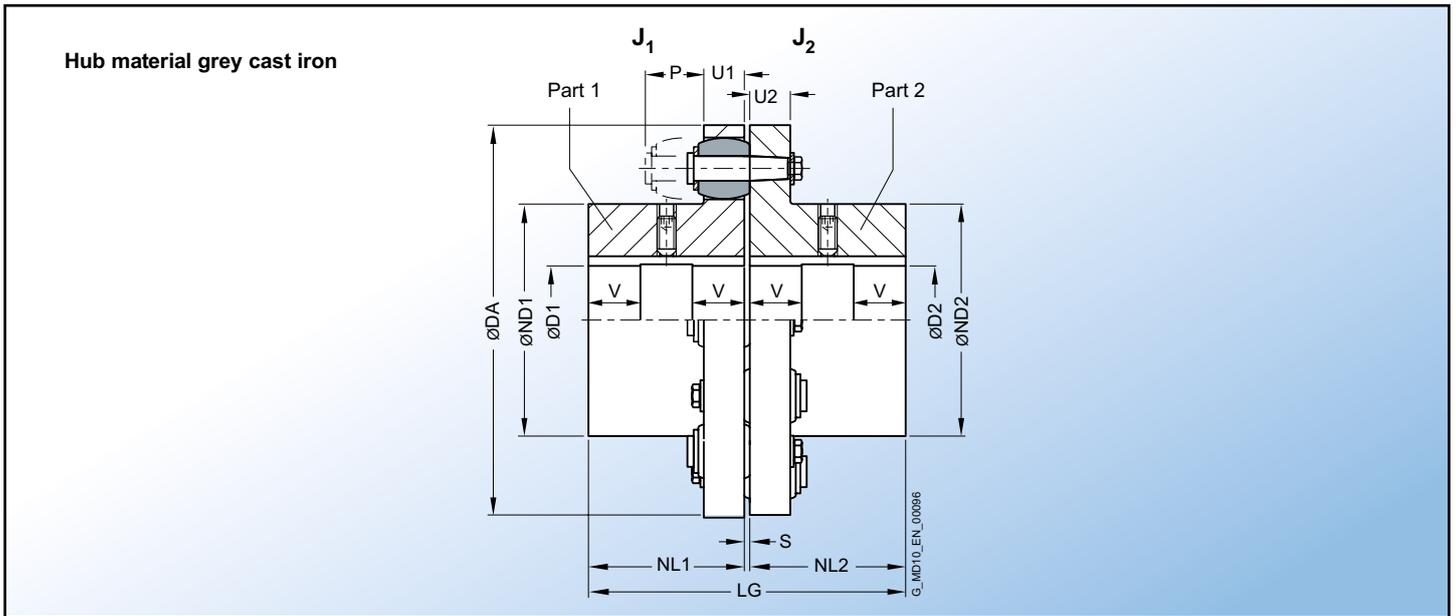

The permitted shaft misalignment depends on the operating speed. As the speed increases, lower shaft misalignment values are permitted. The correction factors for different speeds are specified in the following table. The maximum speed for the respective coupling size and type must be noted!

$$\Delta K_{perm} = \Delta K_{1500} \cdot FKV$$

	Speed in rpm			
	500	1000	1500	3000
Correction factor FKV	170	120	100	70

For fitting, the maximum gap dimension of $S_{max.} = S + \Delta S$ and the minimum gap dimension of $S_{min.} = S - \Delta S$ are permitted.

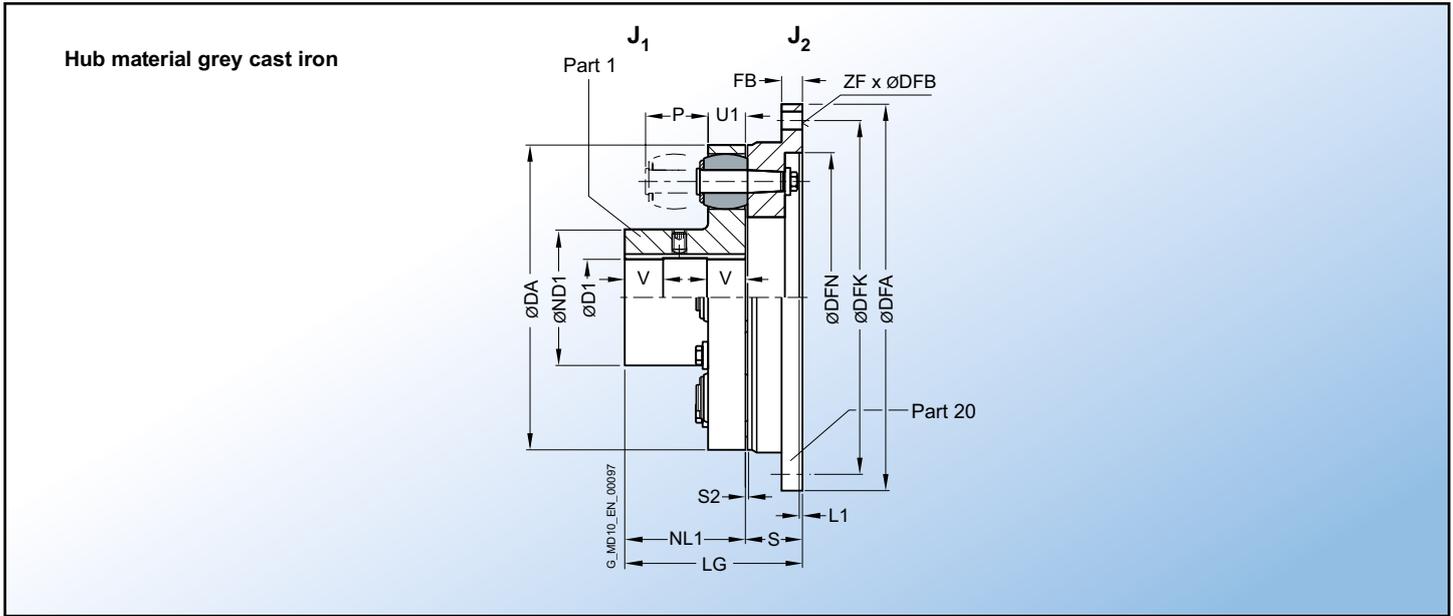

Shaft misalignments ΔK_r and ΔK_w may occur simultaneously.

Configurable variants¹⁾

- » ØD1 Without finished bore.
With finished bore.

Notes

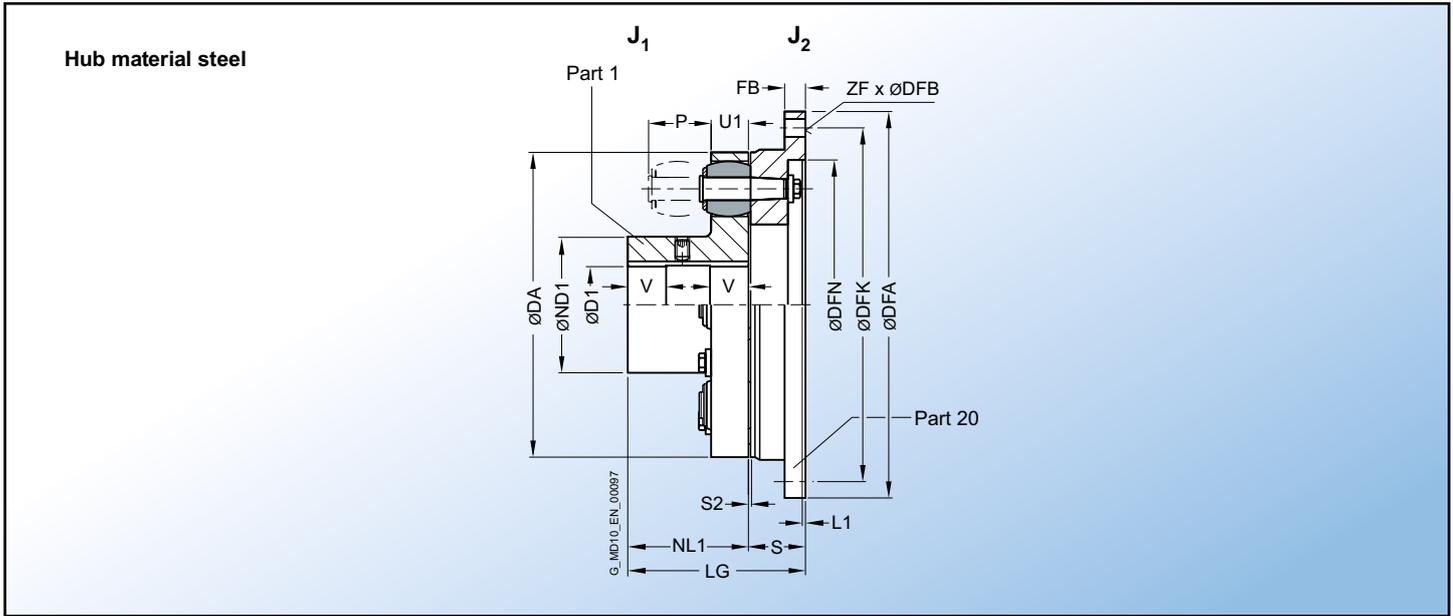

- » For dimensions U1, P and S2, see type RWN on pages 6 to 7.
- » From size 560 bore D1 is provided with a recess of D = +1 mm halfway along the hub.
 $V \approx 1/3 NL$
- » Weight and mass moments of inertia apply to maximum bore diameters.
- » The product codes apply to standard elements of NBR material in the 80 ShoreA variant; the article number for alternative element types is available on request.

Ordering example

- » RUPEX RFN coupling, size 560
- » Part 1: Hub left with bore 180H7 mm, with keyway to DIN 6885 and set screw.

Ordering Code: **2LC0131-6AJ91-0AA0-ZL2B**

Configurable variants¹⁾

- » ØD1 Without finished bore.
- » ØD2 Without finished bore.
- » With finished bore.
- » With finished bore.

Notes

- » Brake disk diameter DB in accordance with customer specification.
- » Additional sizes are available on request.
- » Further dimensions for part 3 on request.
- » Maximum speed in rpm: $n_{Kmax} = 1146/DB$ (DB in m)
- Observe maximum speed of type RWN!
- » Mass moments of inertia and weights can be sufficiently precisely determined as follows:
Mass moments of inertia in kgm^2 :
 $J1 = J1$ from type RWN
 $J2 = J2$ from type RWN + $710 \times BB \times DB4$ (BB and DB in m).
- » Weight in kg: $m = m$ from type RWN + $5700 \times BB \times DB^2$ (BB and DB in m).
- » The product codes apply to standard elements of NBR material in the 80 ShoreA variant; the article number for alternative element types is available on request.

Ordering example

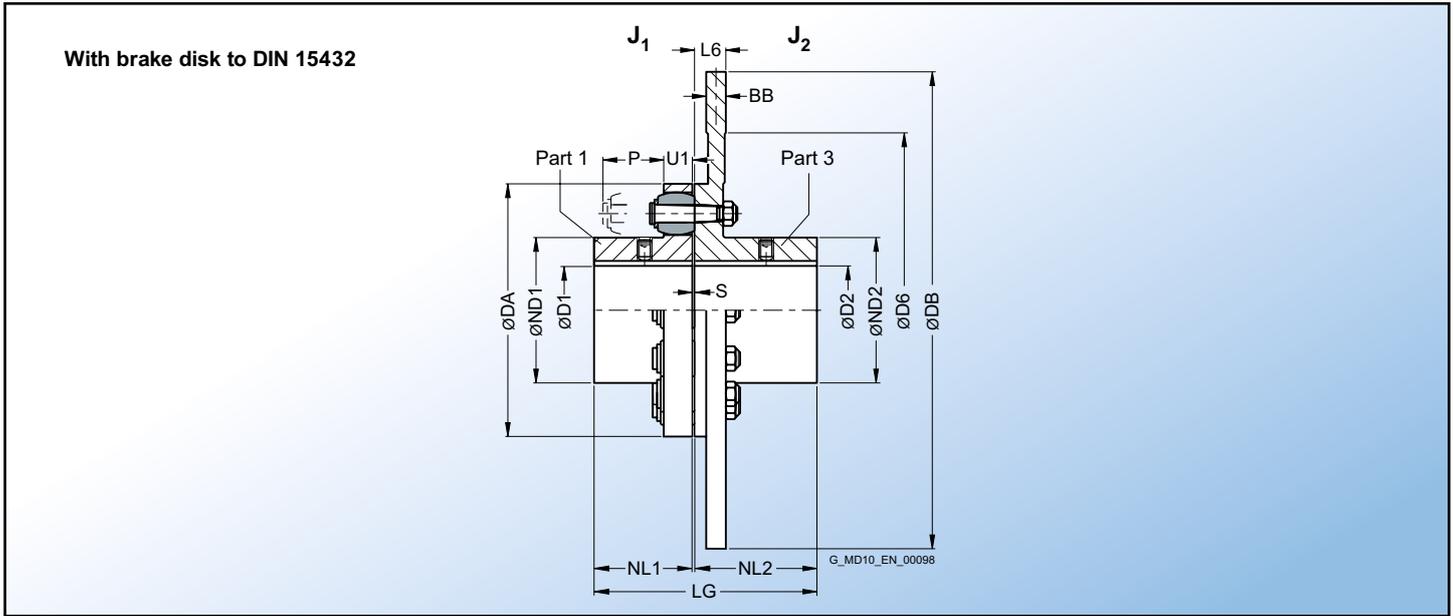

- » RUPLEX RWB coupling, size 252, brake disk 630 x 30 mm.
- » Part 1: Bore D1 = 48H7 mm, keyway to DIN 6885-1 and set screw.
- » Part 3: Bore 42H7 mm, keyway to DIN 6885-1 P9 and set screw.
- » Coupling micro-balanced G6.3 at 1500 rpm in accordance with half parallel key standard.
- » Mass moment of inertia: $J1 = 0.07 kgm^2$
 $J2 = 0.12 kgm^2 + 3.3 kgm^2 = 3.42 kgm^2$
- » Weight: $m = 26.3 kg + 68 kg = 94.3 kg$

Ordering Code: 2LC0130-8AE99-0KA0-ZL1B+M0X+W02+Y95

Plain text to Y95: G 6.3 N, n = 1500 rpm.

 $J2 = 0.12 kgm^2 + 3.3 kgm^2 = 3.42 kgm^2$
- » Weight: $m = 25.8 kg + 73 kg = 98.8 kg$

Ordering Code: **2LC0130-8AH99-0KA0-ZL1B+M0X+W02+Y95**
Plain text to Y95: G 6.3 N, n = 1500 rpm

¹⁾To identify complete item numbers specifying the available finish boring options and further order options, please contact jbj Techniques Ltd. technical office, telephone: +44 (0)1737 767493 or email: info@jbj.co.uk

²⁾For the available DB·BB brake disk dimensions, please contact jbj Techniques Ltd. technical office, as above.

Configurable variants¹⁾

- » ØD1 Without finished bore.
With finished bore.
- » ØD2 Without finished bore.
With finished bore.

Notes

From size 560 bores D1 are provided with a recess of $D = +1$ mm halfway along the hub.

$V \approx 1/3$ NL

- » Brake disk diameter DB in accordance with customer specification.
- » Additional sizes are available on request.
- » Further dimensions for part 3 on request.
- » Maximum speed in rpm: $n_{Kmax} = 1528/DB$ (DB in m)

Observe maximum speed of type RWN!

- » Mass moments of inertia and weights can be sufficiently precisely determined as follows:

Mass moments of inertia in kgm^2 :

$J1 = J1$ from type RWS

$J2 = J2$ from type RWS + $770 \times BB \times DB^4$ (BB and DB in m).

- » Weight in kg: $m = m$ from type RWS + $6160 \times BB \times DB^2$ (BB and DB in m).

- » The product codes apply to standard elements of NBR material in the 80 ShoreA variant; the article number for alternative element types is available on request.

Ordering example

- » RUPEX RWS coupling, size 450, brake disk 900 x 30 mm.
- » Part 1: Bore D1 = 130H7 mm, keyway to DIN 6885-1 and set screw.
- » Part 3: Bore 120H7 mm, keyway to DIN 6885-1 P9 and set screw.

- » Coupling micro-balanced G6.3 at 1500 rpm in accordance with half parallel key standard.

- » Mass moment of inertia: $J1 = 1.74 kgm^2$
 $J2 = 1.74 kgm^2 + 15 kgm^2 = 16.74 kgm^2$

- » Weight: $m = 25.8 kg + 149 kg = 174.8 kg$

Product no: 2LC0131-4AH99-0NA0-Z L1U+M1S+W02+Y95

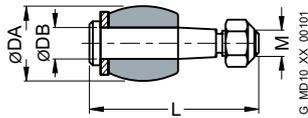

Plain text to Y95: G 6.3 N, n = 1500 rpm.

Buffers and pins

Sizes 105 to 400

Sizes 710 to 2000

Sizes 450 to 630

The buffers of RUPEX couplings are wear parts. The service life depends on the operating conditions.
